The Cognition of Basic Musical Structures David Temperley,2004-08-20 In this book David Temperley addresses a fundamental question about music cognition how do we extract basic kinds of musical information such as meter phrase structure counterpoint pitch spelling harmony and key from music as we hear it Taking a computational approach Temperley develops models for generating these aspects of musical structure The models he proposes are based on preference rules which are criteria for evaluating a possible structural analysis of a piece of music A preference rule system evaluates many possible interpretations and chooses the one that best satisfies the rules After an introductory chapter Temperley presents preference rule systems for generating six basic kinds of musical structure meter phrase structure contrapuntal structure harmony and key as well as pitch spelling the labeling of pitch events with spellings such as A flat or G sharp He suggests

that preference rule systems not only show how musical structures are inferred but also shed light on other aspects of music. He substantiates this claim with discussions of musical ambiguity, retrospective revision, expectation, and music outside the Western canon, rock, and traditional African music. He proposes a framework for the description of musical styles based on preference rule systems and explores the relevance of preference rule systems to higher level aspects of music such as musical schemata, narrative and drama, and musical tension.

Music and Image in Concert Meghan Stevens, 2009. In *Music and Image in Concert*, composer, graphic designer, and writer Meghan Stevens explores the implications to music when images are presented in music concerts. But how do artistic directors ensure that listeners aren't more engaged by the images than the music? Stevens presents a number of concepts that aim to maintain musical salience over added image in the instrumental music concert. This is to avoid the situation that occurs in film where the music is backgrounded and often not heard or not remembered. These concepts cover a range of music-image characteristics including narrative, synchronisation, rhythm, tempo, meaning, emotion, structure, genre, integration, interpretation, voice, and text. As there is little research in this new field, these original concepts draw on a number of other disciplines including film, music, video, multimedia, cognitive psychology, psychomusicology, education, and music philosophy. This book provides a practical approach for adding image to the music concert.
