

# COLDER TIMES

Approximately 20,000 years ago, this is what our planet looked like: the sea level was 125 meters lower, the climate was colder and drier but most importantly, huge ice sheets covered continents since the average temperature was 4°C lower than it is today. From ocean currents, to the fauna and flora, including coastlines and seas, everything was radically different.

The ice sheets of North and a huge continental glacier sheet had advanced across North America and a lot of the land that is now the ocean.

The temperature was not necessarily as cold as we think it is, but the ice sheets were so big that the world was very different.
