The Decarbonization Imperative Michael Lenox, Rebecca Duff, 2021-10-19 Time is of the essence Climate change looms as a malignant force that will reshape our economy and society for generations to come If we are going to avoid the worst effects of climate change we are going to need to effectively decarbonize the global economy by 2050 This doesn't mean a modest or even a drastic improvement in fuel efficiency standards for automobiles It means 100 percent of the cars on the road being battery powered or powered by some other non carbon emitting powertrain It means 100 percent of our global electricity needs being met by renewables and other non carbon emitting sources such as nuclear power It means electrifying the global industrial sector and replacing carbon intensive chemical processes with green alternatives eliminating scope one emissions emissions in production across all industries particularly steel cement petrochemicals which are the backbone of the global economy It means sustainable farming while still feeding a growing global population Responding to the existential threat of climate change Michael Lenox and Rebecca Duff propose a radical reconfiguration of the industries contributing the most

and most harmfully to this planetary crisis Disruptive innovation and a particular calibration of industry dynamics will be key to this change The authors analyze precisely what this might look like for specific sectors of the world economy ranging from agriculture to industrials and building energy and transportation and examine the possible challenges and obstacles to introducing a paradigm shift in each one With regards to existent business practices and products how much and what kind of transformation can be achieved The authors assert that markets are critical to achieving the needed change and that they operate within a larger scale of institutional rules and norms Lenox and Duff conclude with an analysis of policy interventions and strategies that could move us toward clean tech and decarbonization by 2050
