Climate Mitigation in the Land Sector of the Global South Michael I. Brown, 2025-11-27 This book challenges dominant top down approaches to climate mitigation in the land sector arguing that without genuine negotiation recognized land rights and tailored capacity building for Indigenous Peoples and Local Communities IPLCs most solutions will inevitably fail or do harm With civil society increasingly acting as a driving force for transparency and accountability around the world the possibility of achieving feasible impactful Nature based Solutions NbS is growing This vision echoes Brazil s call for a mutir o a collective bottom up mobilization being championed at COP30 in Bel m Drawing on decades of fieldwork and critical analysis Michael Brown reveals why prevailing strategies from REDD to other NbS remain implausible and risk compounding poverty and marginalization in the Global South Instead Brown proposes a paradigm shift elevating a governance innovation Negotiated Governance Platforms NGPs that bring IPLCs governments and climate financiers together as mutually interested partners Through a rich set of case studies that include successes and failures he demonstrates how social license tenure security and robust capacity building are essential for achieving climate action that will be sustainable because it works for key actors at multiple levels Rejecting technocratic quick fixes this book offers a pragmatic blueprint for moving beyond rhetoric to operational reality even in contexts characterized by corruption or weak governance It is essential reading for students scholars and practitioners in climate change natural resource management conservation and green economics who seek grounded actionable strategies that benefit both people and planet

Max Edelson, 2011-05-15 This impressive scholarly debut deftly reinterprets one of America s oldest symbols the southern slave plantation S Max Edelson examines the relationships between planters slaves and the natural world they colonized to create the Carolina Lowcountry European settlers came to South Carolina in 1670 determined to possess an abundant wilderness Over the course of a century they settled highly adaptive rice and indigo plantations across a vast coastal plain Forcing slaves to turn swampy wastelands into productive fields and to channel surging waters into elaborate irrigation systems planters initiated a stunning economic transformation The result Edelson reveals was two interdependent plantation worlds A rough rice frontier became a place of unremitting field labor With the profits planters made Charleston and its hinterland into a refined diversified place to live From urban townhouses and rural retreats they ran multiple plantation enterprises looking to England for affirmation as agriculturists gentlemen and stakeholders in Britain s American empire Offering a new vision of the Old South that was far from static Edelson reveals the plantations of early South Carolina to have been dynamic instruments behind an expansive process of colonization With a bold interdisciplinary approach *Plantation Enterprise* reconstructs the environmental economic and cultural changes that made the Carolina Lowcountry one of the most prosperous and repressive regions in the Atlantic world [South Asia's](#)

Hotspots Muthukumara Mani, Sushenjit Bandyopadhyay, Shun Chonabayashi, Anil Markandya, Thomas Mosier, 2018-07-12 South Asia is particularly vulnerable to climate change Most previous studies have focused on the projected impacts of sea level rise or extreme weather droughts floods heatwaves and storm surges This study adds to that knowledge by identifying the impacts of long term changes in the climate rising temperatures and changes in precipitation patterns on living standards It does so by first building an understanding of the relationship between current climate conditions and living standards across South Asia The study also identifies the set of climate models that are best suited for projecting long term changes in climate across South Asia This novel understanding of living standards and climate change is then combined to project impacts of long term changes in climate on living standards in South Asia The study finds that higher temperatures will reduce living standards for most of South Asia with the severity impacts depending on future global greenhouse gas emissions The study projects hotspots which are locations where long term changes in climate will have negative impacts on living standards Many hotspots are in locations that hitherto have not been identified as particularly vulnerable to climate change Moreover hotspots have distinguishing features that vary from country to country This detailed assessment provides a mosaic of information that enriches our understanding of how climate change will impact people and which populations are most vulnerable The report also provides guidance on the kinds of actions are most likely to reduce impacts of climate change in each country The study is a major contribution to our understanding of how increasing temperatures and changing precipitation patterns interact with social and economic structures at a fine granular level across South Asia
