Nursing Knowledge and Theory Innovation Pamela G. Reed, Nelma B. Crawford Shearer, 2011-02-18 This is an excellent addition to the nursing theory literature and one that focuses on the needs of the new DNP role and knowledge development. As the preface states it encourages the development of theory for practice in practice and could help to close the divide that exists between theorists, researchers, academics, and practice. Score 97 5 stars Doody's. The current paradigm of nursing knowledge suggests theory is developed outside of practice then handed down to the practitioner to practice. This unique text is for students and faculty at the DNP level to engage in developing nursing theory in order to directly guide and improve practice. The content in this book provides strategies for scholarly practice as well as theories for students to develop or modify to fit into their own practice. This book guides students in learning to think in a new way about nursing theory development as it relates to nursing practice. This book provides graduate nursing students with a guide for practice, presents new perspectives and insights that may arise from frustrating clinical problems, and gives students the opportunity to rethink and reformulate existing theory. Key Features: Provides teachers and nursing students with information about the development and use of theory to improve nursing practice. Includes glossary of key terms for reference. Presents discussion questions and activities to stimulate thinking. Identifies reflection points in selected chapters to help students assimilate the content and relate it to their own work.

Advances in Imaging and Electron Physics: Stabilization, Safety, and Security of Distributed Systems Taisuke Izumi, Petr Kuznetsov, 2018-10-25 This book constitutes the refereed proceedings of the 20th International Symposium on Stabilization, Safety, and Security of Distributed Systems SSS 2018 held in Tokyo, Japan, in November 2018. The 24 revised full papers presented were carefully reviewed and selected from 55 submissions. The papers are organized into three tracks reflecting major trends related to distributed systems: theoretical and practical aspects of stabilizing systems, distributed networks, and concurrency and safety in malicious environments.

Advances in Robotics Research Torsten Kröger, Friedrich Wahl, 2009-05-15 The German Workshop on Robotics is a convention of roboticists from academia and industry working on mathematical and algorithmic foundations of robotics, on the design and analysis of robotic systems as well as on robotic applications. Selected contributions from researchers in German-speaking countries as well as from the international robotics community compose this volume. The papers are organized in ten scientific tracks: Kinematic and Dynamic Modeling, Motion Generation, Sensor Integration, Robot Vision, Robot Programming, Humanoid Robots, Grasping, Medical Robotics, Autonomous Helicopters, and Robot Applications. Due to an extensive review and discussion process, this collection of scientific contributions is of very high caliber and promises to strongly influence future robotic research activities.
