Combating Spyware in the Enterprise Paul Piccard, 2006-08-04 *Combating Spyware in the Enterprise* is the first book published on defending enterprise networks from increasingly sophisticated and malicious spyware. *Combating Spyware in the Enterprise* begins by examining the various types of insidious spyware and adware currently propagating across the internet and infiltrating enterprise networks. This section closely examines Spyware's ongoing transformation from nuisance to malicious sophisticated attack vector. Next, the book uncovers spyware's intricate economy and network of malicious hackers and criminals. Forensic investigations presented in this section of the book reveal how increasingly sophisticated spyware can compromise enterprise networks via trojans, keystroke loggers, system monitoring, distributed denial of service attacks, backdoors, viruses, and worms. After close examination of these attack vectors, the book begins to detail both manual and automated techniques for scanning your network for the presence of spyware and customizing your IDS and IPS to detect spyware. From here, the book goes on to detail how to prevent spyware from being initially installed, to mitigating the damage inflicted by spyware should your network become infected. Techniques discussed in this section include slowing the exposure rate, web filtering using Firefox, MacOSX or Linux patching and updating machine restrictions, shielding, deploying anti-spyware, and re-imaging. The book concludes with an analysis of the future of spyware and what the security community must accomplish to win the war against spyware. A recent survey published by Information Security Magazine stated that combating spyware was the 2nd priority for security professionals in 2005. Despite the high priority placed on combating spyware by security professionals, there are no other books published or announced that address this market. Author Paul Piccard is Director of Research for Webroot, which is a market leader for pure play anti-spyware vendors.

Spyware John S. Yang, 2005. The term spyware is not well defined. Generally, it is used to refer to any software that is downloaded onto a person's computer without their knowledge. Spyware may collect information about a computer user's activities and transmit that information to someone else. It may change computer settings or cause pop-up advertisements to appear in that context; it is called adware. Spyware may redirect a Web browser to a site different from what the user intended to visit or change the user's home page. A type of spyware called keylogging software records individual keystrokes even if the author modifies or deletes what was written or if the characters do not appear on the monitor. Thus, passwords, credit card numbers, and other personally identifiable information may be captured and relayed to unauthorized recipients. Some of these software programs have legitimate applications the computer user wants. They obtain the moniker spyware when they are installed surreptitiously or perform additional functions of which the user is unaware. Users typically do not realize that spyware is on their computer. They may have unknowingly downloaded it from the Internet by clicking within a website or it might have been included in an attachment to an electronic mail message, e-mail, or embedded in other software. According to a survey and tests conducted by America Online and the National Cyber Security Alliance, 80% of computers in the test group were

infected by spyware or adware and 89% of the users of those computers were unaware of it The Federal Trade Commission FTC issued a consumer alert on spyware in October 2004 It provided a list of warning signs that might indicate that a computer is infected with spyware and advice on what to do if it is This new book helps shed light on this insidious nightmare created by members of the human race to wreck havoc on the remainder
