## **The Transuranium Elements:**

**The Transuranium Elements** Glenn Theodore Seaborg, Emilio Segrè, 1946      Transuranium Elements Glenn Theodore Seaborg, 1978      **Transuranium People, The: The Inside Story** Darleane C Hoffman, Albert Ghiorso, Glenn T Seaborg, 2000-01-21 In this highly interesting book three pioneering investigators provide an account of the discovery and investigation of the nuclear and chemical properties of the twenty presently known transuranium elements The neutron irradiation of uranium led to the discovery of nuclear fission in 1938 and then to the first transuranium element neptunium atomic number 93 in 1940 Plutonium 94 quickly followed and the next nine elements completed the actinide series by 1961 Investigation of the chemical properties of the actinides was followed more recently by chemical studies of the first three transactinides rutherfordium 104 hahnium 105 and seaborgium 106 Recent discoveries have extended the known elements to 112 a      The Transuranium Elements V. I. Gol'danskii, 2012-12-06 Nearly three years have passed since the publication of the original Russian edition in which time there have appeared various papers on recent research on the transuranium elements of which the most notable concern the production of element 105 at Dubna and Berkeley There has also been much fresh information on elements 104 kurchatovium and 103 lawrencium Our knowledge of shell effects in the fission barrier has been extended Hopes of finding relatively stable superheavy elements have stimulated searches for such elements in nature as well as rapid development in heavy ion acceleration We may see some very considerable discoveries in the next few years The new results vary in reliability and so it is not surprising that some papers on the properties of the heaviest elements have given rise to vigorous debates whose value lies in the way they advance the subject We have not attempted to give an exhaustive survey of recent papers and have merely added brief sections to reflect what we consider to be the most important points from these So far the United States and the USSR have made the most considerable contributions to the synthesis study and use of the transuranium elements so it is especially welcome to us that this book first published in our country should now appear in the USA in an English translation      **The Transuranium Elements** Glenn Theodore Seaborg, 1959      **The Transuranium Elements--the Mendeleev Centennial**, 1970      *Synthetic Transuranium Elements* Earl K. Hyde, 1964      *The Transuranium Elements* Glenn Theodore Seaborg, 1949      **The Transuranium Elements**, 1996 Beginning in the 1930s both chemists and physicists became interested in synthesizing new artificial elements The first transuranium element Np was synthesized in 1940 Over the past six decades 20 transuranium elements have been produced A review of the synthesis is given The procedure of naming the heavy elements is also discussed It appears feasible to produce elements 113 and 114 With the Berkeley Gas filled Separator it should be possible to reach the superheavy elements in the region of the spherical Z 114 shell but with fewer neutrons than the N 184 spherical shell 57 refs 6 figs      The Transuranium Elements Glenn T. Editors Seaborg, 1949      **The Transuranium Elements; Early History**, 1951 In this talk the author tells of the circumstances that led to the discovery of neptunium the first element beyond uranium and the partial

identification of plutonium the next one beyond that The part of the story that lies before 1939 has already been recounted here in the Nobel lectures of Fermi and Hahn Rather the author starts with the discovery of fission by Hahn and Strassmann News of this momentous discovery reached Berkeley early in 1939 The staff of the Radiation Laboratory was put into a state of great excitement and several experiments of a nature designed to check and extend the announced results were started using ionization chambers and pulse amplifiers cloud chambers chemical methods and so forth The author decided to do an experiment of a very simple kind When a nucleus of uranium absorbs a neutron and fission takes place the two resulting fragments fly apart with great violence sufficient to propel them through air or other matter for some distance This distance called the range is a quantity of some interest and the author undertook to measure it by observing the depth of penetration of the fission fragments in a stack of thin aluminum foils The fission fragments came from a thin layer of uranium oxide spread on a sheet of paper and exposed to neutrons from a beryllium target bombarded by 8 Mev deuterons in the 37 inch cyclotron The aluminum foils each with a thickness of about half a milligram per square centimeter were stacked like the pages of a book in immediate contact with the layer of uranium oxide After exposure to the neutrons the sheets of aluminum were separated and examined for radioactivity by means of an ionization chamber The fission fragments of course are radioactive atoms and their activity is found where they stop

**Nuclear Fission and the Transuranium Elements**, 1989 Many of the transuranium elements are produced and isolated in large quantities through the use of neutrons furnished by nuclear fission reactions plutonium atomic number 94 in ton quantities neptunium 93 americium 95 and curium 96 in kilogram quantities berkelium 97 in 100 milligram quantities californium 98 in gram quantities and einsteinium 99 in milligram quantities Transuranium isotopes have found many practical applications as nuclear fuel for the large scale generation of electricity as compact long lived power sources for use in space exploration as means for diagnosis and treatment in the medical area and as tools in numerous industrial processes Of particular interest is the unusual chemistry and impact of these heaviest elements on the periodic table This account will feature these aspects 9 refs 5 figs
