## **Zapotec Science:**

**Zapotec Science** Roberto J. González, 2010-01-01 2003 Julian Steward Award Anthropology Environment Section American Anthropological Association 2002 A CHOICE Outstanding Academic Book How Zapotec agricultural and dietary theories and practices constitute a valid local science Zapotec farmers in the northern sierra of Oaxaca Mexico are highly successful in providing their families with abundant nutritious food in an ecologically sustainable fashion although the premises that guide their agricultural practices would be considered erroneous by the standards of most agronomists and botanists in the United States and Europe In this book Roberto González convincingly argues that in fact Zapotec agricultural and dietary theories and practices constitute a valid local science which has had a reciprocally beneficial relationship with European and United States farming and food systems since the sixteenth century González bases his analysis upon direct participant observation in the farms and fields of a Zapotec village By using the ethnographic fieldwork approach he is able to describe and analyze the rich meanings that campesino families attach to their crops lands and animals González also reviews the history of maize sugarcane and coffee cultivation in the Zapotec region to show how campesino farmers have intelligently and scientifically adapted their farming practices to local conditions over the course of centuries By setting his ethnographic study of the Talea de Castro community within a historical world systems perspective he also skillfully weighs the local impact of national and global currents ranging from Spanish colonialism to the 1910 Mexican Revolution to NAFTA At the same time he shows how at the turn of the twenty first century the sustainable practices of traditional subsistence agriculture are beginning to replace the failed unsustainable techniques of modern industrial farming in some parts of the United States and Europe
