Statistical Inference For Spatial Processes:

Statistical Inference for Spatial Processes B. D. Ripley, 1988 This book is designed for specialists needing an introduction to statistical inference in spatial statistics and its applications One of the author s themes is to show how these techniques give new insights into classical procedures including new examples in likelihood theory and newer statistical paradigms such as Monte Carlo inference and pseudo likelihood Professor Ripley also stresses the importance of edge effects and of the lack of a unique asymptotic setting in spatial problems Throughout he discusses the foundational issues posed and the difficulties both computational and philosophical which arise The final chapters consider image restoration and segmentation methods and the averaging and summarizing of images *Statistical inference for spatial processes* Brian D. Ripley, 1991 *Some Statistical Inference Problems for Spatial Processes* Charles Acquah Allotey, 1983 *Statistical Inference and Simulation for Spatial Point Processes* Jesper Moller, Rasmus Plenge Waagepetersen, 2003-09-25 Spatial point processes play a fundamental role in spatial statistics and today they are an active area of research with many new applications Although other published works address different aspects of spatial point processes most of the classical literature deals only with nonparametric methods and a thorough treatment of the theory and applications of simulation based inference is difficult to find Written by researchers at the top of the field this book collects and unifies recent theoretical advances and examples of applications The authors examine Markov chain Monte Carlo algorithms and explore one of the most important recent developments in MCMC perfect simulation procedures **Statistical Inference for Spatial Poisson Processes** Yu A. Kutoyants, 2012-12-06 This work is devoted to several problems of parametric mainly and nonparametric estimation through the observation of Poisson processes defined on general spaces Poisson processes are quite popular in applied research and therefore they attract the attention of many statisticians There are a lot of good books on point processes and many of them contain chapters devoted to statistical inference for general and particular models of processes There are even chapters on statistical estimation problems for inhomogeneous Poisson processes in asymptotic statements Nevertheless it seems that the asymptotic theory of estimation for nonlinear models of Poisson processes needs some development Here nonlinear means the models of inhomogeneous Poisson processes with intensity function nonlinearly depending on unknown parameters In such situations the estimators usually cannot be written in exact form and are given as solutions of some equations However the models can be quite fruitful in engineering problems and the existing computing algorithms are sufficiently powerful to calculate these estimators Therefore the properties of estimators can be interesting too **Inference for Spatial Processes Using Subsampling** Mark S. Kaiser, Nan-Jung Hsu, Noel A. C. Cressie, Soumendra N. Lahiri, 1996 **Spatial Statistics: Methodological Aspects and Applications** Marc Moore, 2012-12-06 During the past twenty years spatial statistics has experienced important developments and has been applied in many fields of science In view of these facts spatial statistics was an important topic during the theme year on

statistics at the CRM in 1997-98. This volume contains 13 papers based on presentations by eminent researchers at four workshops during that year: Statistical Inference for Spatial Processes, Image Analysis Applications of Spatial Statistics in Earth, Environmental and Health Sciences, and Statistics of Brain Mapping. These papers range from asymptotic considerations for spatial processes to practical considerations related to particular applications including important methodological aspects. Many contributions concern image analysis, mainly images related to brain mapping. Statistical inference for spatial and spatio-temporal processes Chrysoula Dimitriou-Fakalou, 2006

Monte Carlo and Quasi-Monte Carlo Methods 2000 Kai-Tai Fang, Fred J. Hickernell, Harald Niederreiter, 2011-06-28. This book represents the refereed proceedings of the Fourth International Conference on Monte Carlo and Quasi-Monte Carlo Methods in Scientific Computing which was held at Hong Kong Baptist University in 2000. An important feature are invited surveys of the state of the art in key areas such as multidimensional numerical integration, low discrepancy point sets, random number generation and applications of Monte Carlo and quasi-Monte Carlo methods. These proceedings include also carefully selected contributed papers on all aspects of Monte Carlo and quasi-Monte Carlo methods. The reader will be informed about current research in this very active field.

Stochastic Geometry David Coupier, 2019-04-09. This volume offers a unique and accessible overview of the most active fields in Stochastic Geometry up to the frontiers of recent research. Since 2014 the yearly meeting of the French research structure GDR GeoSto has been preceded by two introductory courses. This book contains five of these introductory lectures. The first chapter is a historically motivated introduction to Stochastic Geometry which relates four classical problems: the Buffon needle problem, the Bertrand paradox, the Sylvester four point problem and the bicycle wheel problem to current topics. The remaining chapters give an application motivated introduction to contemporary Stochastic Geometry, each one devoted to a particular branch of the subject: understanding spatial point patterns through intensity and conditional intensities, stochastic methods for image analysis, random fields and scale invariance and the theory of Gibbs point processes. Exposing readers to a rich theory, this book will encourage further exploration of the subject and its wide applications.

Handbook of Environmental and Ecological Statistics Alan E. Gelfand, Montserrat Fuentes, Jennifer A. Hoeting, Richard Lyttleton Smith, 2019-01-15. This handbook focuses on the enormous literature applying statistical methodology and modelling to environmental and ecological processes. The 21st century statistics community has become increasingly interdisciplinary, bringing a large collection of modern tools to all areas of application in environmental processes. In addition, the environmental community has substantially increased its scope of data collection, including observational data, satellite derived data and computer model output. The resultant impact in this latter community has been substantial: no longer are simple regression and analysis of variance methods adequate. The contribution of this handbook is to assemble a state of the art view of this interface. Features: An internationally regarded editorial team; A distinguished collection of contributors; A thoroughly contemporary treatment of a substantial interdisciplinary interface. Written to engage

both statisticians as well as quantitative environmental researchers 34 chapters covering methodology ecological processes environmental exposure and statistical methods in climate science
