Statistical Inference Based On Ranks:

Statistical Inference Based on Ranks Thomas P. Hettmansperger, 1991 Statistical Inference Based on Ranks for Some Repeated Measurement Designs with Exchangeable Errors Within Blocks Md. Mushfiqur Rashid, Douglas A. Wolfe, 1988

Rank-Based Inference Without Symmetric Errors James C. Aubuchon, Thomas P. Hettmansperger, PENNSYLVANIA STATE UNIV UNIVERSITY PARK DEPT OF STATISTICS., 1982 Statistical inference based on ranks is reviewed The role of a parameter and methods for its estimation are discussed In particular the use of density estimation methods is shown to provide a consistent estimate without the assumption of symmetry of the underlying distribution The use of a consistent estimate in constructing hypothesis tests in the linear model without assuming symmetry is discussed *Robust Rank-Based and Nonparametric Methods* Regina Y. Liu, Joseph W. McKean, 2016-09-20 The contributors to this volume include many of the distinguished researchers in this area Many of these scholars have collaborated with Joseph McKean to develop underlying theory for these methods obtain small sample corrections and develop efficient algorithms for their computation The papers cover the scope of the area including robust nonparametric rank based procedures through Bayesian and big data rank based analyses Areas of application include biostatistics and spatial areas Over the last 30 years robust rank based and nonparametric methods have developed considerably These procedures generalize traditional Wilcoxon type methods for one and two sample location problems Research into these procedures has culminated in complete analyses for many of the models used in practice including linear generalized linear mixed and nonlinear models Settings are both multivariate and univariate With the development of R packages in these areas computation of these procedures is easily shared with readers and implemented This book is developed from the International Conference on Robust Rank Based and Nonparametric Methods held at Western Michigan University in April 2015 *Rank and Pseudo-Rank Procedures for Independent Observations in Factorial Designs* Edgar Brunner, Arne C. Bathke, Frank Konietzschke, 2019-07-15 This book explains how to analyze independent data from factorial designs without having to make restrictive assumptions such as normality of the data or equal variances The general approach also allows for ordinal and even dichotomous data The underlying effect size is the nonparametric relative effect which has a simple and intuitive probability interpretation The data analysis is presented as comprehensively as possible including appropriate descriptive statistics which follow a nonparametric paradigm as well as corresponding inferential methods using hypothesis tests and confidence intervals based on pseudo ranks Offering clear explanations an overview of the modern rank and pseudo rank based inference methodology and numerous illustrations with real data examples as well as the necessary R SAS code to run the statistical analyses this book is a valuable resource for statisticians and practitioners alike Scientific Data Ranking Methods , 2008-11-17 This volume presents the basic mathematics of ranking methods through a didactic approach and the integration of relevant applications Ranking methods can be applied in several different fields including decision support toxicology environmental problems proteomics and

genomics analytical chemistry food chemistry and QSAR Covers a wide range of applications from the environment and toxicology to DNA sequencing Incorporates contributions from renowned experts in the field Meets the increasing demand for literature concerned with ranking methods and their applications Encyclopedia of Biopharmaceutical Statistics - Four Volume Set Shein-Chung Chow,2018-09-03 Since the publication of the first edition in 2000 there has been an explosive growth of literature in biopharmaceutical research and development of new medicines This encyclopedia 1 provides a comprehensive and unified presentation of designs and analyses used at different stages of the drug development process 2 gives a well balanced summary of current regulatory requirements and 3 describes recently developed statistical methods in the pharmaceutical sciences Features of the Fourth Edition 1 78 new and revised entries have been added for a total of 308 chapters and a fourth volume has been added to encompass the increased number of chapters 2 Revised and updated entries reflect changes and recent developments in regulatory requirements for the drug review approval process and statistical designs and methodologies 3 Additional topics include multiple stage adaptive trial design in clinical research translational medicine design and analysis of biosimilar drug development big data analytics and real world evidence for clinical research and development 4 A table of contents organized by stages of biopharmaceutical development provides easy access to relevant topics About the Editor Shein Chung Chow Ph D is currently an Associate Director Office of Biostatistics U S Food and Drug Administration FDA Dr Chow is an Adjunct Professor at Duke University School of Medicine as well as Adjunct Professor at Duke NUS Singapore and North Carolina State University Dr Chow is the Editor in Chief of the Journal of Biopharmaceutical Statistics and the Chapman Hall CRC Biostatistics Book Series and the author of 28 books and over 300 methodology papers He was elected Fellow of the American Statistical Association in 1995 *Recent Advances on Sampling Methods and Educational Statistics* Hon Keung Tony Ng, Daniel F.
