need only scan a newspaper or magazine turn on a news broadcast or open a sociology text or journal to see that we live in an age that is heavily dependent on statistical information The extent this dependency is such that it is rather difficult to be an educated person without having at least a passing acquaintance with basic statistics More to the point it is virtually impossible to be a capable social scientist without having a definite if elementary understanding of some basic statistics and statistical methods of analysis But a casual acquaintance with a few simple statistics will not serve the social scientist who attempts to read competently the literature of the field And if one wishes to do quantitative social research and most research published today is quantitative a more thorough knowledge of statistics is imperative The aspiring sociologist need only examine the books and articles that are being published today for evidence of this claim A very large portion of the articles published in the major sociology journals use some form of statistical analysis Some of these articles and other works published sociologists are incomprehensible without a statistics background others will simply be read less intelligently or with a lessened sense of appreciation or criticism      *Surveys In Social Research* David De Vaus, David de Vaus, 2013-12-17

**Making Sense of Statistical Methods in Social Research** Keming Yang, 2010-03-25 Making Sense of Statistical Methods in Social Research is a critical introduction to the use of statistical methods in social research It provides a unique approach to statistics that concentrates on helping social researchers think about the conceptual basis for the statistical methods they re using Whereas other statistical methods books instruct students in how to get through the statistics based elements of their chosen course with as little mathematical knowledge as possible this book aims to improve students statistical literacy with the ultimate goal of turning them into competent researchers Making Sense of Statistical Methods in Social Research contains careful discussion of the conceptual foundation of statistical methods specifying what questions they can or cannot answer The logic of each statistical method or procedure is explained drawing on the historical development of the method existing publications that apply the method and methodological discussions Statistical techniques and procedures are presented not for the purpose of showing how to produce statistics with certain software packages but as

a way of illuminating the underlying logic behind the symbols The limited statistical knowledge that students gain from straight forward how to books makes it very hard for students to move beyond introductory statistics courses to postgraduate study and research This book should help to bridge this gap
