Supercomputing in Engineering Analysis Hojjat Adeli, 2020-08-13 The first volume in this new series has a companion in volume 2 unseen Parallel processing in computational mechanics The first six contributions present general aspects of supercomputing from both hardware and software engineering points of view Subsequent chapters discuss homotopy algorithms

*Scientific Computing on Supercomputers* J.T. Devreese, P.E. Van Camp, 2012-12-06 The International Workshops on The Use of Supercomputers in Theoretical Science have become a tradition at the University of Antwerp Belgium The first one took place in 1984 This volume combines the proceedings of the second workshop December 12 1985 of the third June 16 1987 and of the fourth June 9 1988 The principal aim of the International Workshops is to present the state of the art in scientific high speed computation Indeed during the past ten years computational science has become a third methodology with merits equal to the theoretical and experimental sciences Regrettably access to supercomputers remains limited for academic researchers Nonetheless supercomputers have become a major tool for scientists in a wide variety of scientific fields and they lead to a realistic solution of problems that could not be solved a decade ago It is a pleasure to thank the Belgian National Science Foundation NFWO FNRS for the sponsoring of all the workshops These workshops are organized in the framework of the Third Cycle Vectorization Parallel Processing and Supercomputers which is also funded by the NFWO FNRS The other sponsor I want to thank is the University of Antwerp where the workshops took place The University of Antwerp UIA together with the NFWO FNRS are also the main sponsors of the ALPHA project which gives the scientists of Belgium the opportunity to obtain an easy supercomputer connection

Machine Characterization and Benchmark Performance Prediction Rafael H. Saavedra-Barrera,1988 From runs of standard benchmark suites it is not possible to characterize the machine nor to predict the running time of other benchmarks which have not been run In this paper we report on a new approach to benchmarking and machine characterization We describe the creation and use of a machine analyzer which measures the performance of a given machine on Fortran source language constructs The machine analyzer yields a set of parameters which characterize the machine and spotlight its strong and weak points We also describe a program analyzer which analyzes Fortran programs and determines the frequency of execution of each of the same set of source language operations We then show that by combining a machine characterization and a program characterization we

are able to predict with good accuracy the running time of a given benchmark on a given machine Characterizations are provided for the Cray X MP 48 Cyber 205 IBM 3090 200 Amdahl 5840 ConvexC 1 VAX 8600 VAX 11 785 VAX 11 780 SUN 3 50 and IBM RT PC 125 and for the following benchmark programs suites Los Alamos BMK8A1 Baskett Linpack Livermore Loops Mandelbrot Set NAS Kernels Shell Sort Smith Whetstone and Sieve of Erathostenes [Parallel Computation](#) Selim G.
