**The Evolution and Classification of Flowering Plants** Arthur Cronquist, 1988 This book provides a short version of the general classification of flowering plants together with an exposition of the theory underlying the system The Evolution and Classification of Flowering Plants Arthur Cronquist, 1968 *The Evolution and Classification of Flowering Plants* Arthur Cronquist, 1978 The Evolution and Classification of Flowering Plants [book Review] Vernon L. Harms, 1969

*Flowering Plants* Armen Takhtajan, 2009-07-06 Armen Takhtajan is among the greatest authorities in the world on the evolution of plants This book culminates almost sixty years of the scientist's research of the origin and classification of the flowering plants It presents a continuation of Dr Takhtajan's earlier publications including *Systema Magnoliophytorum* 1987 in Russian and *Diversity and Classification of Flowering Plants* 1997 in English In his latest book the author presents a concise and significantly revised system of plant classification Takhtajan system based on the most recent studies in plant morphology embryology phytochemistry cytology molecular biology and palynology Flowering plants are divided into two classes class Magnoliopsida or Dicotyledons includes 8 subclasses 126 orders c 440 families almost 10 500 genera and no less than 195 000 species and class Liliopsida or Monocotyledons includes 4 subclasses 31 orders 120 families more than 3 000 genera and about 65 000 species This book contains a detailed description of plant orders and descriptive keys to plant families providing characteristic features of the families and their differences Flowering Plants K. Kubitzki, 2012-12-06 The original suggestion to organize a symposium about the classification and evolution of the Flowering Plants was made at the International Botanical Congress at Leningrad in 1975 and the idea was so well accepted by several colleagues that plans for such a symposium quickly took shape An organizing committee consisting of Professor H MERXMULLER Miinchen Professor V H HEYWOOD Reading and Professor K KUBITZKI Hamburg was set up The conference took place on 7 12 September 1977 in the Institut fuer Allgemeine Botanik of the University of Hamburg under the auspices of the International Association for Plant Taxonomy and was attended by 80 participants from 14 countries There have been several meetings in recent years which have dealt with the origin and evolution of the Flowering Plants so that it might be questioned whether yet another symposium dealing with more or less the same subject were really justified As the reader will see from the contents of the book this symposium differed from similar ones held recently in two respects 1 Emphasis was given to methodological aspects of the classification of higher taxa and 2 much classificatory and evolutionary evidence relating to the higher taxa of Flowering Plants was presented *Flowering Plants* Klaus Kubitzki, 1977 Flowering Plants. Eudicots Klaus Kubitzki, 2007-04-24 In this volume treatments are offered for 52 families containing 432 genera belonging to 13 eudicot orders many of which have recently been newly designed four families remain unassigned to order Emphasis is on the early diverging eudicots and basal core eudicots The wealth of information contained in this volume will make it an important source of reference for both the scholar and the practitioner in the fields of pure and applied plant sciences

**Flowering Plants · Dicotyledons** Klaus Kubitzki, Jens G. Rohwer, Volker Bittrich, 1993-07-28 This volume the first of this series dealing with angiosperms comprises the treatments of 73 families representing three major blocks of the dicotyledons magnoliids centrosperms and hamamelids These blocks are generally recognized as subclasses in modern textbooks and works of reference We consider them a convenient means for structuring the hundreds of dicotyledon families but are far from taking them at face value for biological let alone monophyletic entities Angiosperm taxa above the rank of family are little consolidated as is easily seen when comparing various modern classifications Genera and families in contrast are comparatively stable units and they are important in practical terms The genus is the taxon most frequently recognized as a distinct entity even by the layman and generic names provide the key to all information available about plants The family is as a rule homogeneous enough to conveniently summarize biological information yet comprehensive enough to avoid excessive redundancy The emphasis in this series is therefore primarily on families and genera
