*Working without a Net* Richard Foley, 1992-12-17 In this new book Foley defends an epistemology that takes seriously the perspectives of individual thinkers He argues that having rational opinions is a matter of meeting our own internal standards rather than standards that are somehow imposed upon us from the outside It is a matter of making ourselves invulnerable to intellectual self criticism Foley also shows how the theory of rational belief is part of a general theory of rationality He thus avoids treating the rationality of belief as a fundamentally different kind of phenomenon from the rationality of decision or action His approach generates promising suggestions about a wide range of issues e.g the distinction between epistemic and non epistemic reasons for belief the question of what aspects of the Cartesian project are still worth doing the significance of simplicity and other theoretical virtues the relevance of skeptical hypotheses the difference between a theory of rational belief and a theory of knowledge the difference between a theory of rational belief and a theory of rational degrees of belief and the limits of idealization in epistemology
