Statistics As Principled Argument:

Statistics as Principled Argument Robert P. Abelson, 1995 In this illuminating volume Robert P Abelson delves into the too often dismissed problems of interpreting quantitative data and then presenting them in the context of a coherent story about one s research Unlike too many books on statistics this is a remarkably engaging read filled with fascinating real life and real research examples rather than with recipes for analysis It will be of true interest and lasting value to beginning graduate students and seasoned researchers alike The focus of the book is that the purpose of statistics is to organize a useful argument from quantitative evidence using a form of principled rhetoric Five criteria described by the acronym MAGIC magnitude articulation generality interestingness and credibility are proposed as crucial features of a persuasive principled argument Particular statistical methods are discussed with minimum use of formulas and heavy data sets The ideas throughout the book revolve around elementary probability theory t tests and simple issues of research design It is therefore assumed that the reader has already had some access to elementary statistics Many examples are included to explain the connection of statistics to substantive claims about real phenomena

Essential Statistical Concepts for the Quality Professional D. H. Stamatis, 2012-05-02 The essence of any root cause analysis in our modern quality thinking is to go beyond the actual problem This means not only do we have to fix the problem at hand but we also have to identify why the failure occurred and what was the opportunity to apply the appropriate knowledge to avoid the problem in the future Essential Statistical Concepts for the Quality Professional offers a new non

technical statistical approach to quality for effective improvement and productivity by focusing on very specific and fundamental methodologies and tools for the future Written by an expert with more than 30 years of experience in management quality training and consulting the book examines the fundamentals of statistical understanding and by doing so demonstrates the importance of using statistics in the decision making process The author points out pitfalls to keep in mind when undertaking an experiment for improvement and explains how to use statistics in improvement endeavors He discusses data interpretation common tests and confidence intervals and how to plan experiments for improvement The book expands the notion of experimentation by dealing with mathematical models such as regression to optimize the improvement and understand the relationship between several factors It emphasizes the need for sampling and introduces specific techniques to make sure accuracy and precision of the data is appropriate and applicable for the study at hand The author s approach is somewhat new and unique however he details tools and methodologies that can be used to evaluate the system for prevention These tools and methodologies focus on structured repeatable processes that can be instrumental in finding real fixable causes of the human errors and equipment failures that lead to quality issues

Doing Collaborative Research in Psychology Jerusha B. Detweiler-Bedell,Brian Detweiler-Bedell,2013 Doing Collaborative Research in Psychology offers an engaging journey through the process of conducting research in psychology Using an innovative team based approach this hands on guide will assist undergraduates with their research in their courses and in collaboration with faculty or graduate student mentors The focus on this team based approach reflects the collaborative nature of research methods and experimental psychology Students learn how to work as a team generate creative research ideas design and pilot studies recruit participants collect and analyze data write up results in APA style and prepare and give formal research presentations Students also learn practical ways in which they can promote their research skills as they apply to jobs or graduate school A unique feature to this book is the ability to read chapters of the text either sequentially or separately which allows the instructor or research mentor the flexibility to assign those chapters most relevant to the current state of the research project

Innovations in Teaching Statistics Joan B. Garfield,2005 This is a book of stories about teaching statistics These stories are told by fourteen different instructors of innovative statistics courses who demonstrate that learning statistics can be a positive meaningful and even exciting experience Despite the prevailing opinion that statistics courses are dull and difficult for students these stories paint quite a different picture In the classes of the instructors whose stories fill this book students are engaged in learning are empowered to do statistics and appreciate the instructional methods of their teachers The instructors profiled in this book are inspiring dedicated teachers who have devoted considerable effort to creating

courses and materials that enable students to successfully learn statistics Each chapter begins by describing how the author became a teacher of statistics then provides details about the courses they currently teach describing their teaching method textbook types of student assessments and uses of technology One typical class is described in detail to provide a snapshot of what each person's teaching looks like The writers then tell the story of the process they went through in developing an innovative course and conclude their chapters with a discussion of their future plans for course revision or development As you read these stories you will learn about some great activities some helpful technological tools and some innovative assessment methods By reading these stories teachers of statistics will understand and be motivated to try different ways to implement reform recommendations so that these recommendations may continue to lead to a variety of new materials activities and teaching approaches I hope that teachers of statistics may be inspired by these stories and feel encouraged to try new methods leave behind more traditional approaches to teaching statistics and carefully examine the effect of their teaching on student learning
