Simulation Technologies in Networking and Communications Al-Sakib Khan Pathan, Muhammad Mostafa Monowar, Shafiullah Khan, 2014-11-06 Simulation is a widely used mechanism for validating the theoretical models of networking and communication systems Although the claims made based on simulations are considered to be reliable how reliable they really are is best determined with real world implementation trials Simulation Technologies in Networking and Communications Selecting the Best Tool for the Test addresses the spectrum of issues regarding the different mechanisms related to simulation technologies in networking and communications fields Focusing on the practice of simulation testing instead of the theory it presents the work of more than 50 experts from around the world Considers superefficient Monte Carlo simulations Describes how to simulate and evaluate multicast routing algorithms Covers simulation tools for cloud computing and broadband passive optical networks Reports on recent developments in simulation tools for WSNs Examines modeling and simulation of vehicular networks The book compiles expert perspectives about the simulation of various networking and communications technologies These experts review and evaluate popular simulation modeling tools and recommend the best tools for your specific tests They also explain how to determine when theoretical modeling would be preferred over simulation This book does not provide a verdict on the best suitable tool for simulation Instead it supplies authoritative analyses of the different kinds of networks and systems Presenting best practices and insights from global experts the book provides you with an understanding of what to simulate where to simulate whether to simulate or not when to simulate and how to simulate for a wide range of issues

Organizational Network Analysis Anna Ujwary-Gil, 2019-12-11 The integrated meta model for organizational resource audit is a consistent and comprehensive instrument for auditing intangible resources and their relations and associations from the network perspective This book

undertakes a critically important problem of management sciences poorly recognized in literature although determining the current and future competitiveness of enterprises sectors and economies The author notes the need to introduce a theoretical input which is manifested by the meta model An expression of this treatment is the inclusion of the network as a structure of activities further knowledge as an activity and intangible assets as intellectual capital characterized by a structure of connections The case study presented is an illustration of the use of network analysis tools and other instruments to identify not only the most important resources tasks or actors as well as their effectiveness but also to connect the identified networks with each other The author opens the field for applying her methodology revealing the structural and dynamic features of the intangible resources of the organization The novelty of the proposed meta model shows the way to in depth applications of network analysis techniques in an intra organizational environment Organizational Network Analysis makes a significant contribution to the development of management sciences in terms of strategic management and more strictly resource approach to the company through structural definition of knowledge application of the concept of improvement oriented audit abandoning a narrow understanding of this technique in terms of compliance reliable presentation of audits available in the literature rigorous reasoning leading to the development of a meta model close linking of knowledge and resources with the strategy at the design stage of the developed audit model including the analysis of link dynamics and networks together with an extensive metrics proposal an interesting illustration of the application with the use of metrics tables and charts It will be of value to researchers academics managers and students in the fields of strategic management organizational studies social network analysis in management knowledge management and auditing knowledge resources in organizations
