Radium of the Word Craig Dworkin, 2020-12-09 With fresh insight and contemporary relevance Radium of the Word argues that a study of the form of language yields meanings otherwise inaccessible through ordinary reading strategies Attending to the forms of words rather than to their denotations Craig Dworkin traces hidden networks across the surface of texts examining how typography and even individual letters and marks of punctuation can reveal patterns that are significant without being symbolic fully meaningful without communicating any preordained message Radium of the Word takes its title from Mina Loy's poem for Gertrude Stein which hails her as the Madame Curie of the laboratory of vocabulary In this spirit Dworkin considers prose as a dynamic literary form characterized by experimentation Dworkin draws on examples from writers as diverse as Lyn Hejinian William Faulkner and Joseph Roth He takes up the status of the proper name in Modernism with examples from Stein Loy and Guillaume Apollinaire and he offers in depth analyses of individual authors from the counter canon of the avant garde including P Inman Russell Atkins N H Pritchard and Andy Warhol The result is an inspiring intervention in contemporary poetics

Control and Fate of Atmospheric Trace Metals Jozef M. Pacyna, Brynjulf Ottar, 1989-03-31 The increasing production of industrial goods heat and energy as well as traffic has led to the release of considerable amounts of toxic trace metals to the atmosphere The result is elevated concentrations of toxic metals in local populations and eco systems Recently the problem of atmospheric long range transport of trace metals has also been recognized Significant amounts of these pollutants are dispersed and deposited both on regional and global scales In the atmosphere they may influence the chemical reactions Of particular interest is their catalytic effect on the oxidation processes taking place in water droplets or on the surface of wet particles e g the oxidation of sulphur dioxide to sulphate however the main environmental impact starts when the atmospheric trace metals are deposited on ground and vegetation and subsequently brought into the water circulation During the later years significant progress has been made in the development of equipment to reduce and control the atmospheric emissions of toxic trace metals This particularly applies to electrostatic precipitators and wet scrubbers for the collection of fine particles The main objective of the workshop was to survey present knowledge concerning the sources atmospheric fluxes sinks and chemical impact of the atmospheric trace metals and to review the developments of emission control equipment and the perspectives to reduce the potential risks from toxic metals During the first two days of the meeting 15 invited review papers were presented
