FAO has been working for many years on non food biomass products including sustainable bioenergy and biotechnology and it received a mandate to coordinate international work on food first sustainable bioeconomy by 62 Ministers present at the Global Forum for Food and Agriculture GFFA 2015 Moreover FAO has received support from the Government of Germany to develop guidelines on sustainable bioeconomy development Phase 1 2016 Phase 2 2017 mid 2020 This involves work on the bioeconomy monitoring including the selection and use of indicators The ultimate aim of FAO s work on sustainability indicators is to provide

technical assistance to countries and stakeholders in developing and monitoring sustainable bioeconomy more particularly on identifying suitable indicators in line with the Sustainable Bioeconomy Aspirational Principles and related Criteria agreed upon in 2016 by the International Sustainable Bioeconomy Working Group created in the context of FAO's project on Sustainable Bioeconomy Guidelines. In order to cover all the relevant aspects and issues for a sustainable bioeconomy, our approach identifies impact categories from the sustainable bioeconomy principles and criteria. The monitoring approach suggested is balanced since it considers the three sustainability dimensions: social, economic, and environmental, at the same time it proposes to use a limited set of core indicators to keep the monitoring feasible and cost-effective. The suggested methodology starts with a review of existing monitoring approaches to identify already available indicators from which the authors

PLATE: Product Lifetimes And The Environment Conny A. Bakker, 2017-11-15. Product lifetimes are critical for the circular economy: resource efficiency, waste reduction, and low carbon strategies for sustainability and are therefore of interest to academics from many different disciplines as well as original equipment manufacturers (OEMs) and other stakeholders. The challenges related to product lifetimes must be tackled from multiple perspectives, making the sharing of knowledge and expertise from different disciplines particularly important. This book presents papers from the second Product Lifetime and the Environment PLATE conference held in Delft, the Netherlands, in November 2017. The conference originated from the desire to bring together academic researchers working in the field of sustainability to benefit from each other's knowledge and further advance the field. The book includes the 88 full papers delivered at the conference, grouped according to the following 7 conference themes: design for product longevity, product lifetime optimization, cultural perspectives on the throwaway society, circular economy and product lifetimes, business opportunities, economic implications, and marketing strategies, consumer influences on product lifetimes, and policy regulation and legislation. The book will be of interest to all those concerned with sustainable consumption, circular economy, and resource efficiency.
