Positive Development Janis Birkeland, 2012-05-16 Janis Birkeland presents the innovative new paradigm of Positive Development in which the built environment provides greater life quality health amenity and safety for all without sacrificing resources or money With a different form of design development itself can become a sustainability solution A cornerstone of this new paradigm is the eco retrofitting of the vast urban fabric we already inhabit The author presents a revolutionary new tool called SmartMode to achieve this end This book challenges everyone working in or studying the areas of sustainable development planning architecture or the built environment to rethink their current ideas and practices

Guide to Green Building Rating Systems Linda Reeder, 2010-03-29 The one stop guide for choosing a green building rating system Today sustainability is a growing concern for the architects designers builders and owners of commercial and residential buildings Meeting the requirements of a rating system provides a metric to evaluate and set

priorities But the variety and complexity of methods available to assess the eco friendliness of a building can seem overwhelming Guide to Green Building Rating Systems informs readers about the rating system selection process Comparing essential issues such as cost ease of use and building performance this book offers solid guidance that will help readers find the rating system that best fits their needs This easy to follow reference includes An overview of the major national rating systems including LEED Green Globes the National Green Building Standard and ENERGY STAR An in depth look at each rating system including its evolution objectives point structure levels of certification benefits and shortcomings How the ratings systems work for different types of buildings commercial multi family residential and single family residential construction Illustrated case studies from different climate regions with project descriptions cost data and lessons learned by design teams constructors and owners An overview of local regional and international rating systems Guide to Green Building Rating Systems demystifies complex material making this book an essential reference for building professionals engaged in or wishing to pursue sustainable building practices

Handbook of Research on Building Information Modeling and Construction Informatics: Concepts and Technologies Underwood, Jason, Isikdag, Umit, 2009-12-31 In recent years building information modeling has become a very active research area of construction informatics with investigation of ICT use within construction industry processes and organizations The Handbook of Research on Building Information Modeling and Construction Informatics Concepts and Technologies addresses the problems related to information integration and interoperability throughout the lifecycle of a building from feasibility and conceptual design through to demolition and recycling stages Containing research from leading international experts this Handbook of Research provides comprehensive coverage and definitions of the most important issues concepts trends and technologies within the field

Good Green Homes Jennifer Roberts, 2009-09 Green It conjures images of a meadow in spring for some and the color of money for others What does green have to do with our homes In essence green building or sustainable building means being smart about how we use energy water and building materials so that we can live well without needlessly damaging the environment Creating a good green home isn't just about conservation about using less or saving more although that's certainly part of it It's about creating better homes that are easier on the environment less expensive over the long term and more delightful to come home to That's the message Jennifer Roberts wants to share in Good Green Homes the ultimate new guide for people who want to live in comfortable healthy environmentally conscious homes With some simple steps outlined in this book you can save money and do your part to help save the environment For instance using an energy efficient light bulb saves you money It also results in less demand for electricity which in turn results in less pollution from power plants which may help a child with asthma breathe a little easier If you associate green built housing with the unconventional or the quirky tree houses geodesic domes dwellings constructed of tires or soda bottles think again Perfect for homeowners remodelers renters who might be surprised by how much is within their power to change architects

builders and interior designers this book lays out seven fundamental principles of green building illustrated with more than 150 color and 20 black and white photographs of more than twenty five homes Jennifer Roberts launched two retail stores in San Francisco specializing in environmentally sensible consumer products including household goods and is a freelance writer and editor on topics that include energy efficient building design and systems
