web one more point needs to be emphasized about the relationship between electron configuration and the periodic table the

atoms of elements in the same vertical column of the table have similar electron configurations for example consider the alkaline earth elements group iia

web the electron removed during the ionization of beryllium  $1s^2 2s^2$  is an s electron whereas the electron removed during the ionization of boron  $1s^2 2s^2 2p^1$  is a p electron this results in a lower first ionization energy for boron even though its nuclear charge is greater by one proton

web by building up from hydrogen this table can be used to determine the electron configuration for any atom on the periodic table we will now construct the ground state electron configuration and orbital diagram for a selection of atoms in the first and second periods of the periodic table
