The Sampler Motif:

The Sampler Motif Book Brenda Keyes, 1996 Multiple Aspects of DNA and RNA: from Biophysics to Bioinformatics, 2005-12-02 This book is dedicated to the multiple aspects that is biological physical and computational of DNA and RNA molecules These molecules central to vital processes have been experimentally studied by molecular biologists for five decades since the discovery of the structure of DNA by Watson and Crick in 1953 Recent progresses e g use of DNA chips manipulations at the single molecule level availability of huge genomic databases have revealed an imperious need for theoretical modelling Further progresses will clearly not be possible without an integrated understanding of all DNA and RNA aspects and studies The book is intended to be a desktop reference for advanced graduate students or young researchers willing to acquire a broad interdisciplinary understanding of the multiple aspects of DNA and RNA It is divided in three main sections The first section comprises an introduction to biochemistry and biology of nucleic acids The structure and function of DNA are reviewed in R Lavery s chapter The next contribution by V Fritsch and E Westhof concentrates on the folding properties of RNA molecules The cellular processes involving these molecules are reviewed by J Kadonaga with special emphasis on the regulation of transcription These chapters does not require any preliminary knowledge in the field except that of elementary biology and chemistry The second section covers the biophysics of DNA and RNA starting with basics in polymer physics in the contribution by R Khokhlov A large space is then devoted to the presentation of recent experimental and theoretical progresses in the field of single molecule studies T Strick s contribution presents a detailed description of the various micro manipulation techniques and reviews recent experiments on the interactions between DNA and proteins helicases topoisomerases The theoretical modeling of single molecules is presented by J Marko with a special attention paid to the elastic and topological properties of DNA Finally advances in the understanding of electrophoresis a technique of crucial importance in everyday molecular biology are exposed in T Duke s contribution The third section presents provides an overview of the main computational approaches to integrate analyse and simulate molecular and genetic networks First J van Helden introduces a series of statistical and computational methods allowing the identification of short nucleic fragments putatively involved in the regulation of gene expression from sets of promoter sequences controlling co expressed genes Next the chapter by Samsonova et al connects this issue of transcriptional regulation with that of the control of cell differentiation and pattern formation during embryonic development Finally H de Jong and D Thieffry review a series of mathematical approaches to model the dynamical behaviour of complex genetic regulatory networks This contribution includes brief descriptions and references to successful applications of these approaches including the work of B Novak on the dynamical modelling of cell cycle in different model organisms from yeast to mammals Provides a comprehensive overview of the structure and function of DNA and RNA at the interface between physics biology and information science *Research in Computational Molecular Biology* Alberto Apostolico, Concettina Guerra, Sorin

Istrail,Pavel Pevzner,Michael Waterman,2006-08-12 This volume contains the papers presented at the 10th Annual International Conference on Research in Computational Molecular Biology RECOMB 2006 which was held in Venice Italy on April 2 5 2006

Bioinformatics Venkatarajan Mathura,Pandjassarame Kanguane,2008-10-11 Bioinformatics is an evolving field that is gaining popularity due to genomics proteomics and other high throughput biological methods The function of bioinformatic scientists includes biological data storage retrieval and in silico analysis of the results from large scale experiments This requires a grasp of knowledge mining algorithms a thorough understanding of biological knowledge base and the logical relationship of entities that describe a process or the system Bioinformatics researchers are required to be trained in multidisciplinary fields of biology mathematics and computer science Currently the requirements are satisfied by ad hoc researchers who have specific skills in biology or mathematics computer science But the learning curve is steep and the time required to communicate using domain specific terms is becoming a major bottle neck in scientific productivity This workbook provides hands on experience which has been lacking for qualified bioinformatics researchers

Case Studies in Bayesian Statistics Constantine Gatsonis,Robert E. Kass,Alicia Carriquiry,Andrew Gelman,David Higdon,Donna K. Pauler,Isabella Verdinelli,2018-08-17 The 6th Workshop on Case Studies in Bayesian Statistics was held at the Carnegie Mellon University in October 2001 This volume contains the invited case studies with the accompanying discussion as well as contributed papers selected by a refereeing process
