The Somatotrophic Axis In Brain Function:

The Somatotrophic Axis in Brain Function Fred Nyberg, 2005-12-12 The somatotrophic axis is one of the major hormonal systems regulating postnatal growth in mammals It interacts with the central nervous system on several levels Growth hormone GH and insulin like growth factor I IGF I receptors are expressed in many brain areas including the hippocampus pituitary and hypothalamus GH and IGF I are important factors in the development and differentiation of the CNS and have protective properties in dementia as well as in traumatic and ischaemic injury of the CNS Also GH has an important impact on mood and well being with GH secretory capacity being reduced in depression This volume will include chapters 1 on basic knowledge on GH IGF 1 2 on localization of GH IGF 1 and their receptors in the CNS including blood brain barrier transport of both hormones 3 on actions of the two hormones on CNS function basic science 4 on clinical aspects of GH IGF 1 in relation to various CNS functions and disorders and finally 5 on some future perspectives in this area of science Contents are well balanced and cover a variety of relevant topics from basic to clinical research International selection of authors with a good representation of the research on growth hormones A timely publication which will be useful to scientists in both basic and clinical research

New Concepts of Psychostimulants Induced Neurotoxicity Hari Shanker Sharma, 2009-11-05 Published since 1959 International Review of Neurobiology is a well known series appealing to neuroscientists clinicians psychologists physiologists and pharmacologists Led by an internationally renowned editorial board this important serial publishes both eclectic volumes made up of timely reviews and thematic volumes that focus on recent progress in a specific area of neurobiology research With recent advancements in new knowledge it has become evident that psychostimulants and related drugs of abuse are influencing our central nervous system CNS remarkably and could alter their function for a longtime This volume is the first to focus on substance abuse induced brain pathology in the widest sense as it covers alterations in neuronal glial and endothelial cell functions under the influence of acute or chronic usage of substance abuse

Growth Hormone Therapy in Pediatrics - 20 Years of KIGS M. B. Ranke, D. A. Price, E. O. Reiter, 2007-04-27 For 20 years KIGS Pfizer International Growth Database has provided an outstanding tool for monitoring the use efficacy and safety of growth hormone GH treatment in children with short stature of varying origin This volume offers a comprehensive update of the continuing experiences in KIGS and is based on data from more than 50 countries and more than 60 000 patients International experts analyse in detail the basic auxological characteristics of patients and their response to GH treatment for a broad spectrum of growth disorders These include idiopathic GH deficiency organic GH deficiency due to a variety of causes such as congenital malformations and syndromes genetic disorders or treatment for leukaemia or central nervous system tumours and short stature in children born small for gestational age specific syndromes and systemic disorders Each growth disorder is also covered by a review of relevant published data by international experts KIGS has also established itself as a primary source of information about adverse events during long term GH treatment in children The recent analysis

of KIGS data has revealed no new adverse drug reactions since the 10 year follow up Therefore treatment with GH seems a low risk intervention in children and adolescents with various growth disorders The process of developing disease specific growth response prediction models has been ongoing in KIGS for many years The available models are accurate precise and have a relatively high degree of predictive power although further predictors of the growth response remain to be identified The KIGS prediction models can be applied prospectively to new patients enabling their GH therapy to be better tailored and monitored to achieve optimal growth safety and cost outcomes The future of KIGS within the era of evidence based medicine will continue to depend upon the quality of the data reported Therefore the commitment of participating physicians will continue to be a decisive element The ongoing recognition of the importance of valid safety and efficacy information in the practice of paediatric endocrinology is exemplified by this valuable international collaboration of clinicians and the pharmaceutical community
