User Models In Dialog Systems:

User Models in Dialog Systems Alfred Kobsa, Wolfgang Wahlster, 2012-12-06 User models have recently attracted much research interest in the field of artificial intelligence dialog systems It has become evident that flexible user oriented dialog behavior of such systems can be achieved only if the system has access to a model of the user containing assumptions about his her background knowledge as well as his her goals and plans in consulting the system Research in the field of user models investigates how such assumptions can be automatically created represented and exploited by the system in the course of an on line interaction with the user The communication medium in this interaction need not necessarily be a natural language such as English or German Formal interaction languages are also permitted The emphasis is placed on systems with natural language input and output however A dozen major and several more minor user modeling systems have been designed and implemented in the last decade mostly in the context of natural language dialog systems The goal of UM86 the first international workshop on user modeling was to bring together the researchers working on these projects so that results could be discussed and analyzed and hopefully general insights be found that could prove useful for future research The meeting took place in Maria Laach a small village some 40 miles south of Bonn West Germany 25 prominent researchers were invited to participate

User Models in Dialog Systems Alfred Kobsa, Wolfgang Wahlster, S Carberry, 1989-11-02 User models have recently attracted much research interest in the field of artificial intelligence dialog systems It has become evident that a flexible user oriented dialog behavior of such systems can be realized only if the system disposes of a model of the user containing assumptions about the users background knowledge as well as the users goals and plans in consulting the system Research in the field of user models investigates how such assumptions can be automatically created represented and exploited by the system in the course of an interaction with the user This volume is the first survey pertaining to the field of user modeling Most of the prominent international researchers in this area have contributed to this volume Their papers are grouped into four sections The introductory section contains a general view of the field as a whole and a number of surveys of specific problems and techniques in user modeling Sections two and three describe eight user modeling systems with the focus lying on the automatic creation and exploitation of assumptions about the user respectively The final section discusses several limits of current systems and proposes solutions as to how some of the shortcomings might be overcome In order to increase the quality and the coherency of the volume each paper has been reviewed by all other contributors Cross references have been integrated wherever appropriate All contributions are introduced in editorial prefaces pertaining to each section A subject index and an extensive bibliography supplement the book

Estimating Spoken Dialog System Quality with User Models Klaus-Peter Engelbrecht, 2012-08-04 Spoken dialog systems have the potential to offer highly intuitive user interfaces as they allow systems to be controlled using natural language However the complexity inherent in natural language dialogs means that careful testing of the system must be carried out from the very

beginning of the design process This book examines how user models can be used to support such early evaluations in two ways by running simulations of dialogs and by estimating the quality judgments of users First a design environment supporting the creation of dialog flows the simulation of dialogs and the analysis of the simulated data is proposed How the quality of user simulations may be quantified with respect to their suitability for both formative and summative evaluation is then discussed The remainder of the book is dedicated to the problem of predicting quality judgments of users based on interaction data New modeling approaches are presented which process the dialogs as sequences and which allow knowledge about the judgment behavior of users to be incorporated into predictions All proposed methods are validated with example evaluation studies

Spoken Dialogue Systems for Ambient Environments Gary Geunbae Lee, Joseph Mariani, Wolfgang Minker, Satoshi Nakamura, 2010-09-27 This book constitutes the refereed proceedings of the Second International Workshop on Spoken Dialogue Systems IWDS 2010 held in Gotemba Japan in October 2010 The 22 session papers presented together with 2 invited keynote talks were carefully reviewed and selected from numerous submissions The papers deal with topics around Spoken Dialogue Systems for Ambient Environment and discuss common issues of theories applications evaluation limitations general tools and techniques

Spoken Natural Language Dialog Systems Ronnie W. Smith, D. Richard Hipp, 1995-02-02 As spoken natural language dialog systems technology continues to make great strides numerous issues regarding dialog processing still need to be resolved This book presents an exciting new dialog processing architecture that allows for a number of behaviors required for effective human machine interactions including problem solving to help the user carry out a task coherent subdialog movement during the problem solving process user model usage expectation usage for contextual interpretation and error correction and variable initiative behavior for interacting with users of differing expertise The book also details how different dialog problems in processing can be handled simultaneously and provides instructions and in depth result from pertinent experiments Researchers and professionals in natural language systems will find this important new book an invaluable addition to their libraries

Cognition and Pragmatics Dominiek Sandra, Jan-Ola Östman, Jef Verschueren, 2009 The ten volumes of Handbook of Pragmatics Highlights focus on the most salient topics in the field of pragmatics thus dividing its wide interdisciplinary spectrum in a transparent and manageable way While other volumes select philosophical grammatical social variational interactional or discursive angles this third volume focuses on the interface between language and cognition Language use is impossible without the mobilization of a large variety of cognitive processes each serving a different purpose During the last half century cognitive approaches to language have been particularly successful and the broad spectrum of contributions to this volume testify to this success As cognitive approaches to language are by definition a subset of the larger enterprise of cognitive science a contribution on this general topic sets the stage This is joined by a chapter on cognitive grammar a theoretical study of the architecture of human language that is deeply inspired by general cognitive principles A chapter on experimentation offers a crash course on

basic issues of experimental design and on the rationale behind statistical testing in general and the most important statistical tests in particular offering a methodological toolkit for understanding many of the other contributions Different chapters cover a broad range of topics language acquisition psycholinguistics specialized topics within the latter field e g the bilingual mental lexicon categorization and aspects of language awareness Some chapters home in on what have become indispensable perspectives on the cognitive underpinnings of language the way language is represented and processed in the human brain and simulation studies The ever growing success of the latter type of studies is exemplified for instance by the highly flourishing connectionist tradition and the more general paradigm of artificial intelligence each of which is dealt with in a separate contribution

Embracing the Tune of Expression: An Mental Symphony within **User Models In Dialog Systems**

In a world taken by monitors and the ceaseless chatter of instant interaction, the melodic elegance and emotional symphony developed by the prepared word often disappear into the background, eclipsed by the persistent noise and disruptions that permeate our lives. Nevertheless, nestled within the pages of **User Models In Dialog Systems** a marvelous literary prize overflowing with organic feelings, lies an immersive symphony waiting to be embraced. Crafted by an elegant composer of language, this interesting masterpiece conducts readers on a psychological trip, well unraveling the concealed melodies and profound influence resonating within each cautiously crafted phrase. Within the depths of this poignant analysis, we shall explore the book is key harmonies, analyze their enthralling writing type, and surrender ourselves to the profound resonance that echoes in the depths of readers souls.
