University UK This insightful book explores the most important established and emerging qualitative and quantitative research methods in tourism the authors provide a detailed overview of the nature of the research method its use in tourism the advantages and limitations and future directions for research Each chapter is structured to provide information on the nature of the technique and its evolution background and types of problems that the technique is designed to handle applications of the technique to tourism including discussion of studies that have used the technique and their findings advantages and limitations of the technique conceptually and for policy formulation and further developments and applications of the technique in tourism research Handbook of Research Methods in Tourism will appeal to social scientists students as well as researchers in tourism who use quantitative and qualitative research techniques Dynamic General Equilibrium Modeling Burkhard Heer, Alfred Maussner, 2011-10-20 Modern business cycle theory and growth theory uses stochastic dynamic general equilibrium models In order to solve these models economists need to use many mathematical tools This book presents various methods in order to compute the dynamics of general equilibrium models In part I the representative agent stochastic growth model is solved with the help of value function iteration linear and linear quadratic approximation methods parameterised expectations and projection methods In order to apply these methods fundamentals from numerical analysis are reviewed in detail In particular the book discusses issues that are often neglected in existing work on computational methods e g how to find a good initial value In part II the authors discuss methods in order to solve heterogeneous agent economies In such economies the distribution of the individual state variables is endogenous This part of the book also serves as an introduction to the modern theory of distribution economics Applications include the dynamics of the income distribution over the business cycle or the overlapping generations model In an accompanying home page to this book computer codes to all applications can be downloaded **Introduction to Computational Economics Using Fortran** Hans Fehr, Fabian Kindermann, 2018 Introduction to Computational Economics Using Fortran is the essential guide to conducting economic research on a computer Aimed at students of all levels of education as well as advanced economic researchers it facilitates the first steps into writing programs using Fortran Introduction to Computational Economics Using Fortran assumes no prior experience as it introduces the reader to this programming language It shows the reader how to apply the most important numerical methods conducted by computational economists using the toolbox that accompanies this text It offers various examples from economics and finance organized in self contained chapters that speak to a diverse range of levels and academic backgrounds Each topic is supported by an explanation of the theoretical background a demonstration of how to implement the problem on the computer and a discussion of simulation results Readers can work through various exercises that promote practical experience and deepen their economic and technical insights This textbook is accompanied by a website from which readers can download all program codes as well as a numerical toolbox and receive technical information on how to install Fortran on their computer **Documentation and Use of Dynagem** Xinshen

Diao,1999 The Distributional Aspects of Social Security and Social Security Reform Martin Feldstein,Jeffrey B. Liebman,2007-11-01 Social security is the largest and perhaps the most popular program run by the federal government Given the projected increase in both individual life expectancy and sheer number of retirees however the current system faces an eventual overload Alternative proposals have emerged ranging from reductions in future benefits to a rise in taxrevenue to various forms of investment based personal retirement accounts As this volume suggests the distributional consequences of these proposals are substantially different and may disproportionately affect those groups who depend on social security to avoid poverty in old age Together these studies persuasively show that appropriately designed investment based social security reforms can effectively reduce the long term burden of an aging society on future taxpayers increase the expected future income of retirees and mitigate poverty rates among the elderly *Globalization and Regional Economic Modeling* Russel Cooper,Kieran Donaghy,Geoffrey Hewings,2007-09-23 Globalization is affecting regional economies in a broad spectrum of aspects from labor market conditions and development policies to climate change To understand better how this works we need both conceptual and methodological contributions We need new schemes to organize our thinking direct our attention and frame thought experiments on the basis of which guidance may be offered And we need methodological innovations that enable us to carry out studies and thought experiments at levels of spatial and temporal resolution and formal complexity adequate to capture and account for the phenomena that characterize globalization The chapters of this volume written by an international cast of eminent regional scientists represent contributions of both types in many cases introducing and demonstrating the use of new tools for analyzing and understanding enormous changes underway in regional economies around the world Dynamic Macroeconomic Analysis Sumru Altug,Jagjit S. Chadha,Charles Nolan,2003-11-20 Dynamic stochastic general equilibrium DSGE models have begun to dominate the field of macroeconomic theory and policy making These models describe the evolution of macroeconomic activity as a recursive sequence of outcomes based upon the optimal decision rules of rational households firms and policy makers Whilst posing a micro founded dynamic optimisation problem for agents under uncertainty such models have been shown to be both analytically tractable and sufficiently rich for meaningful policy analysis in a wide class of macroeconomic problems for example monetary and fiscal policy economic cycles and growth and capital flows This volume collects specially commissioned papers from leading researchers which pull together some of the key results in diverse areas This book will promote research using optimising models and inform researchers post graduate students and economists in policy oriented organisations of some of the key findings and policy implications **A Simple Dynamic General Equilibrium Model** Epstein, Larry G,University of Toronto. Department of Economics,University of Toronto. Institute for Policy Analysis,1985 **World Scientific Reference On Asia-pacific Trade Policies (In 2 Volumes)** Kym Anderson,2019-12-19 Protectionism has been placed under the media spotlight with news headlines generated by populist anti globalization movements and

Donald Trump's term as US President. Such a policy stance is putting at risk unilateral trade reform efforts in the Asia Pacific region and elsewhere. This two volume reference work provides a timely update on how far the region has come in opening markets. It analyzes the motivations or ostensible objectives of policies adopted in the past, the changing extent of the domestic price distortions involved, the economic effects of those policies at home and abroad, the political economy forces at work that brought about those policies and their subsequent reform, their consequences for international trade, economic welfare and poverty alleviation, and prospects for sustainable improvements in current policies. Case studies of major East Asian economies and Australia reveal how government priorities to assist farmers versus manufacturers changed over the past century but especially since the 1980s and how that has affected trade between natural resource poor and resource rich economies. This set is highly recommended for those who are interested in the economics and politics of trade policies, agricultural economics, economic development and food and nutrition security in the Asia Pacific region and beyond.

Routledge Handbook of Energy Economics Uğur Soytaş, Ramazan Sarı, 2019-09-23. Energy consumption and production have major influences on the economy, environment and society but in return they are also influenced by how the economy is structured, how the social institutions work and how the society deals with environmental degradation. The need for integrated assessment of the relationship between energy, economy, environment and society is clear and this handbook offers an in depth review of all four pillars of the energy economy environment society nexus. Bringing together contributions from all over the world, this handbook includes sections devoted to each of the four pillars. Moreover, as the financialization of commodity markets has made risk analysis more complicated and intriguing, the sections also cover energy commodity markets and their links to other financial and non financial markets. In addition, econometric modeling and the forecasting of energy needs as well as energy prices and volatilities are also explored. Each part emphasizes the multidisciplinary nature of the energy economics field and from this perspective, chapters offer a review of models and methods used in the literature. The Routledge Handbook of Energy Economics will be of great interest to all those studying and researching in the area of energy economics. It offers guideline suggestions for policy makers as well as for future research. *Applied General Equilibrium Models*, 1988

Developments in Tourism Research David Airey, John Tribe, 2007-09-20. This book aims to be a showcase for cutting edge research, offering a high edited selection of the best paper submitted to the 2006 tourism conference at the University of Surrey, which itself is a celebration of 40 years of tourism education at the University. The emphasis of the book is on contributions which offer new insights and approaches to tourism research rather than case studies or applications of existing research methods to new contexts and this is where the book is unique. **Review of**

Economic Dynamics, 2003. International Handbook on the Economics of Energy Lester C. Hunt, Joanne Evans, 2011-01-01. As an essential component for economic growth, energy has a significant impact on the global economy. The need to meet growing energy demand has prompted cutting edge innovation in clean technology in an attempt to realise

environmental and cost objectives whilst ensuring the security of energy supply This Handbook offers a comprehensive review of the economics of energy including contributions from a distinguished array of international specialists It provides a thorough discussion of the major research issues in this topical field of economics Themes addressed include the theory of energy supply demand and policy empirical modelling of energy demand holistic energy models an analysis of coal gas electricity oil and the markets within which they operate and a discussion of the current key energy policy issues The topics of pricing transmission regulation security energy efficiency new technologies and climate change are also discussed The International Handbook on the Economics of Energy presents a comprehensive overview of the state of the art research making it an indispensable reference for researchers advanced students practitioners and policy makers alike **Action Against Climate Change The Kyoto Protocol and Beyond** OECD,1999-10-14 This publication presents analysis on various questions concerning the climate change debate Journal of Economic Literature ,2001 Solving Dynamic General Equilibrium Models Using a Second-order Approximation to the Policy Function to the Policy Function Stephanie Schmitt-Grohe,Martin Uribe,Centre for Economic Policy Research,2001
