Women And Computers:

Recoding Gender Janet Abbate, 2012-10-19 The untold history of women and computing how pioneering women succeeded in a field shaped by gender biases Today women earn a relatively low percentage of computer science degrees and hold proportionately few technical computing jobs Meanwhile the stereotype of the male computer geek seems to be everywhere in popular culture Few people know that women were a significant presence in the early decades of computing in both the United States and Britain Indeed programming in postwar years was considered woman's work perhaps in contrast to the more manly task of building the computers themselves In *Recoding Gender* Janet Abbate explores the untold history of women in computer science and programming from the Second World War to the late twentieth century Demonstrating how gender has shaped the culture of computing she offers a valuable historical perspective on today's concerns over women's underrepresentation in the field Abbate describes the experiences of women who worked with the earliest electronic digital computers Colossus the wartime codebreaking computer at Bletchley Park outside London and the American ENIAC developed to calculate ballistics She examines postwar methods for recruiting programmers and the 1960s redefinition of programming as the more masculine software engineering She describes the social and business innovations of two early software entrepreneurs Elsie Shutt and Stephanie Shirley and she examines the career paths of women in academic computer science Abbate's account of the bold and creative strategies of women who loved computing work excelled at it and forged successful careers will provide inspiration for those working to change gendered computing culture **Gender**

Codes Thomas J. Misa, 2011-09-14 The computing profession faces a serious gender crisis Today fewer women enter computing than anytime in the past 25 years This book provides an unprecedented look at the history of women and men in computing detailing how the computing profession emerged and matured and how the field became male coded Women's experiences working in offices education libraries programming and government are examined for clues on how and where women succeeded and where they struggled It also provides a unique international dimension with studies examining the U S Great Britain Germany Norway and Greece Scholars in history gender women's studies and science and technology studies as well as department chairs and hiring directors will find this volume illuminating **Women and Computers** Anna Frances Grundy, John Grundy, 1996 This book paints a picture of women's reactions to computers and what the prospects are for women working in computing It is based on the author's own experiences and takes a strongly feminist stand point

Women Who Launched the Computer Age Laurie Calkhoven, 2016-09-06 This book was chosen by the Children's Book Council as a best STEM book of 2017 Meet the women who programmed the first all electronic computer and built the technological language kids today can't live without in this fascinating nonfiction Level 3 Ready to Read part of a new series of biographies about people you should meet In 1946 six brilliant young women programmed the first all electronic programmable computer the ENIAC part of a secret World War II project They learned to program without any programming

languages or tools and by the time they were finished the ENIAC could run a complicated calculus equation in seconds But when the ENIAC was presented to the press and public the women were never introduced or given credit for their work Learn all about what they did and how their invention still matters today in this story of six amazing young women everyone should meet A special section at the back of the book includes extras on subjects like history and math plus interesting trivia facts about how computers have changed over time With the You Should Meet series learning about historical figures has never been so much fun

Unlocking the Clubhouse Jane Margolis, Allan Fisher, 2003-02-28 Understanding and overcoming the gender gap in computer science education The information technology revolution is transforming almost every aspect of society but girls and women are largely out of the loop Although women surf the Web in equal numbers to men and make a majority of online purchases few are involved in the design and creation of new technology It is mostly men whose perspectives and priorities inform the development of computing innovations and who reap the lion's share of the financial rewards As only a small fraction of high school and college computer science students are female the field is likely to remain a male clubhouse absent major changes In Unlocking the Clubhouse social scientist Jane Margolis and computer scientist and educator Allan Fisher examine the many influences contributing to the gender gap in computing The book is based on interviews with more than 100 computer science students of both sexes from Carnegie Mellon University a major center of computer science research over a period of four years as well as classroom observations and conversations with hundreds of college and high school faculty The interviews capture the dynamic details of the female computing experience from the family computer kept in a brother's bedroom to women's feelings of alienation in college computing classes The authors investigate the familial educational and institutional origins of the computing gender gap They also describe educational reforms that have made a dramatic difference at Carnegie Mellon where the percentage of women entering the School of Computer Science rose from 7% in 1995 to 42% in 2000 and at high schools around the country

Women, Work and Computerization A. Frances Grundy, 1997-05-20 This volume considers the submissions to the 6th International IFIP TC 9 WG 9.1 Conference on Women Work and Computerization WWC 97 The conference provides an interdisciplinary forum for researchers practitioners and

users in the field of information technology In this book the authors discuss how different areas of society are being transformed by computer technology but with particular emphasis on changes in women s work and life and how these have come about Such transformations include the transitions from women s traditional work to work based on modern technology from communicating within personal communities to communicating within virtual communities from traditional job gendering to new perspectives on who does what

Technologies Hope Morritt,1997-05-08 This book highlights the diversity of professional women in education who use computer based technologies They represent differences in socioeconomic status ethnicity and age They were selected for this study because they use computer based technologies in their daily work The conceptual framework underlying this research is feminist standpoint theory Standpoint theory in this study stems from the work of Harding 1991 who has grounded standpoint theory in eight claims These claims were connected to clusters that were organized into segments that could be contrasted compared and analyzed Themes were developed and photographs were used to operationalize the cluster categories Methodology used for this study included three structured interviews The first interview elicited background information Interview two used the photographs as an auto driving technique to stimulate discussion The third interview asked the respondents to validate their narratives and to describe their reactions to the feminist perspective Results of this study demonstrate the importance of valuing women s lives as starting points for research and as generators of evidence for or against knowledge claims specifically as their lives relate to computer based technologies Women need to learn to value and network with other women in the use of technology These respondents early learning experiences reflect the cultural agenda and an absence of hands on science activities They also encounter gender oppression in many forms in their daily life experiences Although they all had opportunities to engage in computer learning at different stages of their life the time to learn and the opportunities to access computers were constraints that prevented further advancement These women educators predict positive futures for girls who are computer literate but warn of the potential of the increasing power of technology to divide women in our society into the haves and the have nots Implications and practical applications from
