Essential Image Processing and GIS for Remote Sensing Jian Guo Liu, Philippa J. Mason, 2013-04-10 *Essential Image Processing and GIS for Remote Sensing* is an accessible overview of the subject and successfully draws together these three key areas in a balanced and comprehensive manner The book provides an overview of essential techniques and a selection of key case studies in a variety of application areas Key concepts and ideas are introduced in a clear and logical manner and described through the provision of numerous relevant conceptual illustrations Mathematical detail is kept to a minimum and only referred to where necessary for ease of understanding Such concepts are explained through common sense terms rather than in rigorous mathematical detail when explaining image processing and GIS techniques to enable students to grasp the essentials of a notoriously challenging subject area The book is clearly divided into three parts with the first part introducing essential image processing techniques for remote sensing The second part looks at GIS and begins with an overview of the concepts structures and mechanisms by which GIS operates Finally the third part introduces Remote Sensing Applications Throughout the book the relationships between GIS Image Processing and Remote Sensing are clearly identified to ensure that students are able to apply the various techniques that have been covered appropriately The latter chapters use numerous relevant case studies to illustrate various remote sensing image processing and GIS applications in practice

Homological Algebra S.I. Gelfand, Yu.I. Manin, 1994-03-29 This book the first printing of which was published as volume 38 of the Encyclopaedia of Mathematical Sciences presents a modern approach to homological algebra based on the systematic use of the terminology and ideas of derived categories and derived functors The book contains applications of homological algebra to the theory of sheaves on topological spaces to Hodge theory and to the theory of modules over rings of algebraic differential operators algebraic D modules The authors Gelfand and Manin explain all the main ideas of the theory of derived categories Both authors are well known researchers and the second Manin is famous for his work in algebraic geometry and mathematical physics The book is an excellent reference for graduate students and researchers in mathematics and also for physicists who use methods from algebraic geometry and algebraic topology

Advanced Real Analysis Anthony W. Knap, 2008-07-11 Presents a comprehensive treatment with a global view of the subject Rich in examples problems with hints and solutions the book makes a welcome addition to the library of every mathematician

A Study in Derived Algebraic Geometry Dennis Gaitsgory, Nick Rozenblyum, 2017 Derived algebraic geometry is a far reaching generalization of algebraic geometry It has found numerous applications in various parts of mathematics most prominently in representation theory This volume develops the theory of ind coherent sheaves in the context of derived algebraic geometry Ind coherent sheaves are a renormalization of quasi coherent sheaves and provide a natural setting for Grothendieck Serre duality as well as geometric incarnations of numerous categories of interest in representation theory This volume consists of three parts and an appendix The first part is a survey of homotopical algebra in the setting of categories and the basics of

derived algebraic geometry The second part builds the theory of ind coherent sheaves as a functor out of the category of correspondences and studies the relationship between ind coherent and quasi coherent sheaves The third part sets up the general machinery of the category of correspondences needed for the second part The category of correspondences via the theory developed in the third part provides a general framework for Grothendieck's six functor formalism The appendix provides the necessary background on categories needed for the third part
