The Software Challenge:

   The Software Factory Challenge Herbert Weber,1997 The Eureka Software Factory project ESF was set up by a Group of European partners in 1987 Its objective was broadly to improve the large scale software production process by introducing an industrialised approach to have The Software Factory Challenge social organisational and technical aspects The project was set up under the pan European Eureka programme and it was funded by the partners together with their national governments This book is not a history of the ESF project but rather a presentation of its main ideas and achievements and an account of how the concepts pioneered by the project have become part of a general movement in both the industrial and academic domains In this movement the facility for the production use and maintenance of large scale computer artefacts the Software Factory is treated in a wide and organic way so as to include concepts such as business value and process improvement with the development of new technologies being driven by these new wide requirements This new approach is in contrast with a narrowly technological one in which individual tasks like programming are aided by machines but in which the production process as a whole is not supported The main body of the book is divided into four Parts Part I gives a short overview of the ESF project and its ideas and goes on to attempt to place the ESF work in the context of industry as a whole with reference to both producers and users of Information Technology systems Part II sets out to explain the technological basis of the Software Factory as seen by ESF and goes on to describe some experimental and pioneering implementations of Factory Support Environments and their constituents Part III is devoted to the most complete implementation of an ESF Factory Support Environment to date Kernel 2r This Section provides a highly detailed discussion of both design and implementation issues In Part IV addresses what deployment strategies are now available to continue the spread of these ideas in order to meet the goal of better software based systems i e systems which are safer more economical to build more easily changed and more useful than those that have been built up to now Finally a Glossary of Terms and a list of References is given Readers those who have a professional interest in Information Technology   **Solving Software Challenges for Exascale** Stefano Markidis,Erwin Laure,2015-02-18 This volume contains the thoroughly refereed post conference proceedings of the Second International Conference on Exascale Applications and Software EASC 2014 held in Stockholm Sweden in April 2014 The 6 full papers presented together with 6 short papers were carefully reviewed and selected from 17 submissions They are organized in two topical sections named toward exascale scientific applications and development environment for exascale applications   *Software Challenges to Exascale Computing* Amit Majumdar,Ritu Arora,2019-04-09 This book constitutes the refereed proceedings of the Second Workshop on Software Challenges to Exascale Computing SCEC 2018 held in Delhi India in December 2018 The 10 papers presented in this volume were carefully reviewed and selected from 24 submissions and focus on scientific applications performance analysis and optimization science gateways and high productivity tools and frameworks   *Solving the Year 2000 Software Problem* United States.
