The 34th Saas Fee advanced course of the Swiss Society of Astronomy and Astrophysics SSAA took place from March 15 to 20 2004 in Davos on the subject of The Sun Solar Analogs and the Climate

Presently the Swiss mountain resort of Davos is probably most well known for hosting an event on globalization However it is because Davos also happens to be the seat of the Physikalisch Meteorologisches Observatorium Davos and World Radiation Center that this course on a global subject was hosted here Exceptionally the topic of this course was not purely astrophysical but the members of the SSAA decided to support it all the same due to the timely topic of global warming and its possible link to solar variations In these times of concern about global warming it is important to understand solar variability and its interaction with the atmosphere Only in this way can we distinguish between the solar and anthropogenic contributions to the rising temperatures Therefore this course addressed the observed variability of the Sun and the present understanding of the variability's origin and its impact on the Earth's climate Comparing the solar variability with that of solar analog stars leads to a better understanding of the solar activity cycle and magnetic activity in general and helps us to estimate how large the solar variations could be on longer time scales

In spite of the fantastic weather and snow conditions which reigned during this week the participants assiduously took part in the lectures This is proof of the high quality of the lectures that the three speakers Joanna Haigh Mike Lockwood and David Soderblom delivered We deeply thank them for their contributions and efforts and hope that the readers will enjoy the book as much as we enjoyed their lectures **English Mechanic and Mirror of Science**, 1878 *Meteorology...* Sir George Clarke Simpson, 1923 *Baughman's Buyer and Seller Cost and Computation Tables* Herschel Ray Austin Baughman, 1920
