Users Guide To Spectral Sequences:

A User's Guide to Spectral Sequences John McCleary, 2001 Spectral sequences are among the most elegant and powerful methods of computation in mathematics This book describes some of the most important examples of spectral sequences and some of their most spectacular applications The first part treats the algebraic foundations for this sort of homological algebra starting from informal calculations The heart of the text is an exposition of the classical examples from homotopy theory with chapters on the Leray Serre spectral sequence the Eilenberg Moore spectral sequence the Adams spectral sequence and in this new edition the Bockstein spectral sequence The last part of the book treats applications throughout mathematics including the theory of knots and links algebraic geometry differential geometry and algebra This is an excellent reference for students and researchers in geometry topology and algebra

A User's Guide to Spectral Sequences ICM Edition John McCleary, 2010-07-23

A User's Guide to Algebraic Topology C. T. J. Dodson, C.T. Dodson, P.E. Parker, Phillip E. Parker, 1997-01-31 This book arose from courses taught by the authors and is designed for both instructional and reference use during and after a first course in algebraic topology It is a handbook for users who want to calculate but whose main interests are in applications using the current literature rather than in developing the theory Typical areas of applications are differential geometry and theoretical physics We start gently with numerous pictures to illustrate the fundamental ideas and constructions in homotopy theory that are needed in later chapters We show how to calculate homotopy groups homology groups and cohomology rings of most of the major theories exact homotopy sequences of fibrations some important spectral sequences and all the obstructions that we can compute from these Our approach is to mix illustrative examples with those proofs that actually develop transferable calculational aids We give extensive appendices with notes on background material extensive tables of data and a thorough index Audience Graduate students and professionals in mathematics and physics

Differential Geometric Methods In Theoretical Physics - Proceedings Of The Xx International Conference (In 2 Volumes) Sultan Catto, Alvany Rocha, 1992-01-27 This proceedings reports on some of the most recent advances on the interaction between Differential Geometry and Theoretical Physics a very active and exciting area of contemporary research The papers are grouped into the following four broad categories Geometric Methods Noncommutative Geometry Quantum Gravity and Topological Quantum Field Theory A few of the topics covered are Chern Simons Theory and Generalizations Knot Invariants Models of 2D Gravity Quantum Groups and Strings on Black Holes

The Mathematical and Philosophical Legacy of Alexander Grothendieck Marco Panza, Daniele C. Struppa, Jean-Jacques Szczeciniarz, 2025-01-21 Alexander Grothendieck is often considered one of the greatest mathematicians of the twentieth century if not all time and his unique vision continues to impact and inspire many fields and researchers today Utilizing a multidisciplinary approach this edited volume explores the profound influence his work and ideas have had not only on mathematics but also on logic and philosophy Chapters are written by international scholars and many were inspired by talks

given at the conference Grothendieck A Multifarious Giant at Chapman University May 24 28 2022 Some chapters are written from a historical perspective and discuss the development of the main themes that characterized Grothendieck's work Others are more mathematical in nature analyzing and extending some of his more relevant and obscure results that are still not well understood Philosophical implications and applications in logic are the subjects of other chapters This volume will be of interest not only to mathematicians working in algebraic geometry category theory and other areas to which Grothendieck contributed but also to philosophers logicians and historians of science

Homotopy Invariant Algebraic Structures Jean-Pierre Meyer, 1999 This volume presents the proceedings of the conference held in honor of J Michael Boardman's 60th birthday It brings into print his classic work on conditionally convergent spectral sequences Over the past 30 years it has become evident that some of the deepest questions in algebra are best understood against the background of homotopy theory Boardman and Vogt's theory of homotopy theoretic algebraic structures and the theory of spectra for example were two benchmark breakthroughs underlying the development of algebraic K theory and the recent advances in the theory of motives The volume begins with short notes by Mac Lane May Stasheff and others on the early and recent history of the subject But the bulk of the volume consists of research papers on topics that have been strongly influenced by Boardman's work Articles give readers a vivid sense of the current state of the theory of homotopy invariant algebraic structures Also included are two major foundational papers by Goerss and Strickland on applications of methods of algebraic Dieudonné modules and formal schemes to problems of topology Boardman is known for the depth and wit of his ideas This volume is intended to reflect and to celebrate those fine characteristics

Differential Geometry Elisabetta Barletta, Sorin Dragomir, Mohammad Hasan Shahid, Falleh R. Al-Solamy, 2025-02-06 This book Differential Geometry Manifolds Bundles and Characteristic Classes Book I A is the first in a captivating series of four books presenting a choice of topics among fundamental and more advanced in differential geometry DG such as manifolds and tensor calculus differentiable actions and principal bundles parallel displacement and exponential mappings holonomy complex line bundles and characteristic classes The inclusion of an appendix on a few elements of algebraic topology provides a didactical guide towards the more advanced Algebraic Topology literature The subsequent three books of the series are Differential Geometry Riemannian Geometry and Isometric Immersions Book I B Differential Geometry Foundations of Cauchy Riemann and Pseudohermitian Geometry Book I C Differential Geometry Advanced Topics in Cauchy Riemann and Pseudohermitian Geometry Book I D The four books belong to an ampler book project Differential Geometry Partial Differential Equations and Mathematical Physics by the same authors and aim to demonstrate how certain portions of DG and the theory of partial differential equations apply to general relativity and quantum gravity theory These books supply some of the ad hoc DG machinery yet do not constitute a comprehensive treatise on DG but rather Authors choice based on their scientific mathematical and physical interests These are centered around the theory of immersions isometric holomorphic and Cauchy
