

How Do Broken Bones Heal?

Bones are flexible enough to give a bit when physical force is applied, but if that force is too great, they'll snap like a plastic ruler bent too far. Luckily, they also repair themselves naturally (even better with a cast).

1

Immediately after a fracture occurs, a blood clot and callus form around it.

2

New "threads" of bone cells start to grow on both sides of the fracture line toward one another.

3

Eventually, the fracture closes up and the callus is absorbed by the new cells. This process may take from six weeks to a year.
