Recovery of Gray Wolves in the Great Lakes Region of the United States Adrian P. Wydeven, Timothy R. van Deelen, Edward Heske, 2009-02-27 In this book we document and evaluate the recovery of gray wolves *Canis lupus* in the Great Lakes region of the United States The Great Lakes region is unique in that it was the only portion of the lower 48 states where wolves were never completely extirpated This region also contains the area where many of the first modern concepts of wolf conservation and research were developed Early proponents of wolf conservation such as Aldo Leopold Sigurd Olson and Durward Allen lived and worked in the region The longest ongoing research on wolf prey relations see Vucetich and Peterson Chap 3 and the first use of radio telemetry for studying wolves see Mech Chap 2 occurred in the Great Lakes region The Great Lakes region is the first place in the United States where Endangered wolf populations recovered All three states Minnesota Wisconsin and Michigan developed ecologically and socially sound wolf conservation plans and the federal government delisted the population of wolves in these states from the United States list of endangered and threatened species on March 12 2007 see Refsnider Chap 21 Wolf management reverted to the individual states at that time Although this delisting has since been challenged we believe that biological recovery of wolves has occurred and anticipate the delisting will be restored This will be the first case of wolf conservation reverting from the federal government to the state conservation agencies in the United States
