Soft Computing And Its Applications In Business And Economics:

Soft Computing and its Applications in Business and Economics Rafik Aziz Aliev, Bijan Fazlollahi, Rashad Rafik Aliev, 2012-08-10 Soft Computing and its Applications in Business and Economics or SC BE for short is a work whose importance is hard to exaggerate Authored by leading contributors to soft computing and its applications SC BE is a sequel to an earlier book by Professors R A Aliev and R R Aliev Soft Computing and Its Applications World Scientific 2001 SC BE is a self contained exposition of the foundations of soft computing and presents a vast compendium of its applications to business finance decision analysis and economics One cannot but be greatly impressed by the wide variety of applications applications ranging from use of fuzzy logic in transportation and health case systems to use of a neuro fuzzy approach to modeling of credit risk in trading and application of soft computing to e commerce To view the contents of SC BE in a clearer perspective a bit of history is in order In science as in other realms of human activity there is a tendency to be nationalistic to commit oneself to a particular methodology and relegate to a position of inferiority or irrelevance all alternative methodologies As we move further into the age of machine intelligence and automated reasoning we run into more and more problems which do not lend themselves to solution through the use of our favorite methodology *Soft Computing and Its Applications in Business and Economics* Rafik Aziz Aliev, Bijan Fazlollahi, Rashad Rafik Aliev, 2004-07-07 **Soft Computing in Economics and Finance** Ludmila Dymowa, 2011-01-21 Currently the methods of Soft Computing are successfully used for risk analysis in budgeting e commerce development portfolio selection Black Scholes option pricing models corporate acquisition systems evaluating investments in advanced manufacturing technology interactive fuzzy interval reasoning for smart web shopping fuzzy scheduling and logistic An essential feature of economic and financial problems is that there are always at least two criteria to be taken into account profit maximization and risk minimization Therefore the economic and financial problems are multiple criteria ones In this book a new systematization of the problems of multiple criteria decision making is proposed which allows the author to reveal unsolved problems The solutions of them are presented as well and implemented to deal with some important real world problems such as investment project s evaluation tool steel material selection problem stock screening and fuzzy logistic It is well known that the best results in real world applications can be obtained using the synthesis of modern methods of soft computing Therefore the developed by the author new approach to building effective stock trading systems based on the synthesis of fuzzy logic and the Dempster Shafer theory seems to be a considerable contribution to the application of soft computing method in economics and finance An important problem of capital budgeting is the fuzzy evaluation of the Internal Rate of Return In this book this problem is solved using a new method which makes it possible to solve linear and nonlinear interval and fuzzy equations and systems of them The developed new method allows the author to obtain an effective solution of the Leontjev s input output problem in the interval setting 11th International Conference on Theory and Application of Soft Computing, Computing with Words and Perceptions and Artificial Intelligence -

These two volumes constitute the Proceedings of the 7th International Workshop on Soft Computing Applications SOFA 2016 held on 24-26 August 2016 in Arad Romania. This edition was organized by Aurel Vlaicu University of Arad Romania, University of Belgrade Serbia in conjunction with the Institute of Computer Science Iasi Branch of the Romanian Academy, IEEE Romanian Section, Romanian Society of Control Engineering and Technical Informatics SRAIT Arad Section, General Association of Engineers in Romania Arad Section and BTM Resources Arad. The soft computing concept was introduced by Lotfi Zadeh in 1991 and serves to highlight the emergence of computing methodologies in which the accent is on exploiting the tolerance for imprecision and uncertainty to achieve tractability, robustness and lower costs. Soft computing facilitates the combined use of fuzzy logic, neurocomputing, evolutionary computing and probabilistic computing leading to the concept of hybrid intelligent systems. The rapid emergence of new tools and applications calls for a synergy of scientific and technological disciplines in order to reveal the great potential of soft computing in all domains. The conference papers included in these proceedings published post-conference were grouped into the following areas of research: Methods and Applications in Electrical Engineering, Knowledge Based Technologies for Web Applications, Cloud Computing, Security Algorithms and Computer Networks, Biomedical Applications, Image, Text and Signal Processing, Machine Learning and Applications, Business Process Management, Fuzzy Applications, Theory and Fuzzy Control, Computational Intelligence in Education, Soft Computing, Fuzzy Logic in Biometrics, SCFLB, Soft Computing Algorithms Applied in Economy, Industry and Communication Technology, Modelling and Applications in Textiles. The book helps to disseminate advances in selected active research directions in the field of soft computing along with current issues and applications of related topics. As such it provides valuable information for professors, researchers and graduate students in the area of soft computing techniques and applications.
