Electronic Iran Niki Akhavan, 2013-12-25 *Electronic Iran* introduces the concept of the Iranian Internet a framework that captures interlinked transnational networks of virtual and offline spaces Taking her cues from early Internet ethnographies that stress the importance of treating the Internet as both a site and product of cultural production accounts in media studies that highlight the continuities between old and new media and a range of works that have made critical interventions in the field of Iranian studies Niki Akhavan traces key developments and confronts conventional wisdom about digital media in general and contemporary Iranian culture and politics in particular Akhavan focuses largely on the years between 1998 and 2012 to reveal a diverse and combative virtual landscape where both geographically and ideologically dispersed individuals and groups deployed Internet technologies to variously construct defend and challenge narratives of Iranian national identity society and politics While it tempers celebratory claims that have dominated assessments of the Iranian Internet *Electronic Iran* is ultimately optimistic in its outlook As it exposes and assesses overlooked aspects of the Iranian Internet the book sketches a more complete map of its dynamic landscape and suggests that the transformative powers of digital media can only be developed and understood if attention is paid to both the specificities of new technologies as well as the local and transnational contexts in which they appear

Free Expression, Globalism, and the New Strategic Communication Monroe E. Price, 2014-12-15 Vast changes in technologies and geopolitics have produced a wholesale shift in the way states and other powerful entities think about the production and retention of popular loyalties Strategic communication has embraced these changes as stakes increase and the techniques of information management become more pervasive These shifts in strategic communications impact free speech as major players in a global context rhetorically embrace a world of transparency all the while increasing surveillance and modes of control turning altered media technologies and traditional media doctrines to their advantage This book exposes the anxieties of loss of control on the one hand and the missed opportunities for greater freedom on the other New

Lowery (Major),2023-02-18 Current analysis of Bitcoin s underlying proof of work technology is almost exclusively based on financial monetary or economic theory Recycling the same theoretical frameworks when performing hypothesis deductive analysis of Bitcoin has the potential to create systemic level analytical bias which could negatively impact public policy making efforts and could even pose a threat to US national security This thesis introduces a novel theoretical framework for analyzing the potential national strategic impact of Bitcoin as an electro cyber security technology rather than a pee to peer cash system The goal of this thesis is to give the research community a different frame of reference they can utilize to generate hypotheses and deductively analyze the potential risks and rewards of proof of work technologies as something other than strictly monetary technology The author asserts it would be beneficial for researchers to explore alternative functionality of proof of work technologies to eliminate potential blind spots provide a more well rounded understanding of the risks and rewards of proof of work protocols like Bitcoin and positively contribute to the development of more informed public policy in support of the March 2022 US Presidential Executive Order on Improving the Nation s Cybersecurity Utilizing a grounded theory methodology the author combines different concepts from diverse fields of knowledge e g biology psychology anthropology political science computer

science systems security and modern military strategic theory to formulate a novel framework called Power Projection Theory Based on the core concepts of Power Projection Theory the author inductively reasons that proof of work technologies like Bitcoin could not only function as monetary technology but could also and perhaps more importantly function as a new form of electro cyber power projection technology which could empower nations to secure their most precious bits of information including but not limited to financial bits of information against belligerent actors by giving them the ability to impose severe physical costs on other nations in from and through cyberspace The author calls this novel power projection tactic softwar and explores its potential impact on national strategic security in the 21st century Like most grounded theory research efforts the primary deliverable of this thesis is a novel theory rather than deductive analysis of a hypothesis derived from existing theory
