Solid Modeling by Computers Mary S Pickett, John W Boyse, 1985-05-01 **Solid Modeling by Computers** Mary S. Pickett, John W. Boyse, 2012-12-06 This book contains the papers presented at the international research symposium Solid Modeling by Computers From Theory to Applications held at the General Motors Research Laboratories on September 25 27 1983 This was the 28th symposium in a series which the Research Laboratories began sponsoring in 1957 Each symposium has focused on a topic that is both under active study at the Research Laboratories and is also of interest to the larger technical community Solid modeling is still a very young research area young even when compared with other computer related research fields Ten years ago few people recognized the importance of being able to create complete and unambiguous computer models of mechanical parts Today there is wide recognition that computer representations of solids are a prerequisite for the automation of many engineering analyses and manufacturing applications In September 1983 the time was ripe for a symposium on this subject Research had already demonstrated the efficacy of solid modeling as a tool in computer automated design and manufacturing and there were significant results which could be presented at the symposium Yet the field was still young enough that we could bring together theorists in solid modeling and practitioners applying solid modeling to other research areas in a group small enough to allow a stimulating exchange of ideas

Computer Graphics and Geometric Modelling Max K. Agoston, 2005-01-04 Possibly the most comprehensive overview of computer graphics as seen in the context of geometric modeling this two volume work covers implementation and theory in a thorough and systematic fashion It covers the computer graphics part of the field of geometric modeling and includes all the standard computer graphics topics The CD ROM features two companion programs *Handbook of Computer Aided Geometric Design* G. Farin, J. Hoschek, M.-S. Kim, 2002-08-13 This book provides a comprehensive coverage of the fields Geometric Modeling Computer Aided Design and Scientific Visualization or Computer Aided Geometric Design Leading international experts have contributed thus creating a one of a kind collection of authoritative articles There are chapters outlining basic theory in tutorial style as well as application oriented articles Aspects which are covered include Historical outline Curve and surface methods Scientific Visualization Implicit methods Reverse engineering This book is meant to be a reference text for researchers in the field as well as an introduction to graduate students wishing to get some exposure to this subject **Rapid Prototyping Technology** Md Enamul Hoque, 2011-09-26 Modern engineering often deals with customized design that requires easy low cost and rapid fabrication Rapid prototyping RP is a popular technology that enables quick and easy fabrication of customized forms objects directly from computer aided design CAD model The needs for quick product development decreased time to market and highly customized and low quantity parts are driving the demand for RP technology Today RP technology also known as solid freeform fabrication SFF or desktop manufacturing DM or layer manufacturing LM is regarded as an efficient tool to bring the product concept into the product realization rapidly

Though all the RP technologies are additive they are still different from each other in the way of building layers and or nature of building materials This book delivers up to date information about RP technology focusing on the overview of the principles functional requirements design constraints etc of specific technology

Solid Modeling and Applications Dugan Um,2015-09-29 The lessons in this fundamental text equip students with the theory of Computer Assisted Design CAD Computer Assisted Engineering CAE the essentials of Rapid Prototyping as well as practical skills needed to apply this understanding in real world design and manufacturing settings The book includes three main areas CAD CAE and Rapid Prototyping each enriched with numerous examples and exercises In the CAD section Professor Um outlines the basic concept of geometric modeling Hermite and Bezier Spline curves theory and 3 dimensional surface theories as well as rendering theory The CAE section explores mesh generation theory matrix notion for FEM the stiffness method and truss Equations And in Rapid Prototyping the author illustrates stereo lithographic theory and introduces popular modern RP technologies Solid Modeling and Applications Rapid Prototyping CAD and CAE Theory is ideal for university students in various engineering disciplines as well as design engineers involved in product design analysis and validation
