Renate Marian van Dijk-Coombes, 2023-04-05 Depictions of standards form a fundamental part of the visual repertoire of ancient Mesopotamia. These depictions can offer great insight into the thought world of the peoples with which they are associated because different standards were associated with different deities and could be found in multiple contexts. In this book Renate Marian van Dijk Coombes examines the standards which are represented in the visual culture of the third and fourth millennia BCE covering the Uruk Early Dynastic Akkadian and Neo Sumerian periods. She analyses each of the different standards: how they looked, what they symbolised, and the contexts in which they were found. In addition, developments and changes in the representation of these standards are traced across the periods under discussion.

Based on a wide variety of previously unstudied sources, these articles explain how science was applied to three aspects of Islamic ritual in the Middle Ages: the regulation of the lunar calendar, the organisation of the times of the five daily prayers, and the determination of the sacred direction qibla towards the Kaaba in Mecca. Simple procedures of folk astronomy were used by the scholars of religious law who determined popular practice; more complicated mathematical methods were provided by the scientists, and this proved a powerful incentive for the development of scientific analysis and research. Some of these procedures were to have far-reaching consequences. For example, the astronomical alignment of the Kaaba, known to various medieval writers but long forgotten, led to the adoption of similar alignments for the qibla, and the final articles show how these were calculated, whether from astronomical observation or geographical computation, and their impact on the orientation of religious and secular architecture across the Islamic world. C'est partir d'une grande diversité de sources inexplorées que ces articles expliquent comment la science avait été appliquée à trois aspects du rituel islamique au Moyen Âge: la régulation du calendrier lunaire, l'organisation des heures assignées aux cinq prières quotidiennes et l'établissement de la direction sacrée qibla vers la Kaaba de la Mecque. Des procédures simples d'astronomie populaire étaient utilisées par les juristes en droit religieux qui dépendaient de la pratique populaire; des méthodes mathématiques plus complexes étaient offertes par les hommes de science, ce qui en effet s'avéra être une motivation puissante dans le développement de l'analyse et de la recherche scientifique. Certains de ces procédés eurent des conséquences d'une grande portée par la suite.
