David Amaral, Daniel Geschwind, Geraldine Dawson, 2011-05-01 Autism is an emerging area of basic and clinical research and has only recently been recognized as a major topic in biomedical research. Approximately 1 in 150 children are diagnosed as autistic, so it is also an intense growth area in behavioral and educational treatments. Financial resources have begun to be raised for more comprehensive research, and an increasing number of scientists are becoming involved in autism research. In many respects, autism has become a model for conducting translational research on a psychiatric disorder. This text provides a comprehensive summary of all current knowledge related to the behavioral, experiential, and biomedical features of the autism spectrum disorders, including major behavioral and cognitive syndromology, common comorbid conditions, neuropathology, neuroimmunology, and other neurological correlates such as seizures, allergy, and immunology, gastroenterology, infectious disease, and epidemiology. Edited by three leading researchers, this volume contains over 80 chapters and nine shorter commentaries by thought leaders in the field, making the book a virtual who's who of autism research. This carefully developed book is a comprehensive and authoritative reference for what we know in this area, as well as a guidepost for the next several years in all areas of autism research.
