Trends and Impacts of Foreign

Investment in Developing Country Agriculture Pascal Liu,2013

Substantial increases in agricultural investments in developing countries are needed to combat poverty and realize food security and nutrition goals There is evidence that agricultural investments can generate a wide range of developmental benefits but these benefits cannot be expected to arise automatically and some forms of large scale investment carry risks for host countries Although there has been much debate about the potential benefits and risks of international investment there is no systematic evidence on the actual impacts on the host country and their determinants In order to acquire an in depth understanding of potential benefits constraints and costs of foreign investment in agriculture and of the business models that are more conducive to development FAO has undertaken research in developing countries This publication summarizes the results of this research in particular through the presentation of the main findings of case studies in nine developing countries It presents case studies on policies to attract foreign investment in agriculture and their impacts on national economic development in selected countries in Africa Asian and Latin America
