Models of Innovation Benoit Godin,2017-02-24 Beno t Godin is a Professor at the Institut national de la recherche scientifique Montreal Models abound in science technology and society STS studies and in science technology and innovation STI studies They are continually being invented with one author developing many versions of the same model over time At the same time models are regularly criticized Such is the case with the most influential model in STS STI the linear model of innovation In this book Beno t Godin examines the emergence and diffusion of the three most important conceptual models of innovation from the early twentieth century to the late 1980s stage models linear models and holistic models Godin first traces the history of the models of innovation constructed during this period considering why these particular models came into being and what use was made of them He then rethinks and debunks the historical narratives of models developed by theorists of innovation Godin documents a greater diversity of thinkers and schools than in the conventional account tracing a genealogy of models beginning with anthropologists industrialists and practitioners in the first half of the twentieth century to their later formalization in STS STI Godin suggests that a model is a conceptualization which could be narrative or a set of conceptualizations or a paradigmatic perspective often in pictorial form and reduced discursively to a simplified representation of reality Why are so many things called models Godin claims that model has a rhetorical function First a model is a symbol of scientificity Second a model travels easily among scholars and policy makers Calling a conceptualization or narrative or perspective a model facilitates its propagation
