Fractals and Universal Spaces in Dimension Theory Stephen Lipscomb, 2008-10-28 Historically for metric spaces the quest for universal spaces in dimension theory spanned approximately a century of mathematical research The history breaks naturally into two periods the classical separable metric and the modern not necessarily separable metric The classical theory is now well documented in several books This monograph is the first book to unify the modern theory from 1960 2007 Like the classical theory the modern theory fundamentally involves the unit interval Unique features include The use of graphics to illustrate the fractal view of these spaces Lucid coverage of a range of topics including point set topology and mapping theory fractal geometry and algebraic topology A final chapter contains surveys and provides historical context for related research that includes other imbedding theorems graph theory and closed imbeddings Each chapter contains a comment section that provides historical context with references that serve as a bridge to the literature This monograph will be useful to topologists to mathematicians working in fractal geometry and to historians of mathematics Being the first monograph to focus on the connection between generalized fractals and universal spaces in dimension theory it will be a natural text for graduate seminars or self study the interested reader will find many relevant open problems which will create further research into these topics

Theories of Dimension from Ancient to Modern Times Dale Martin Johnson, 2025-12-02 This book provides a history and analysis of the ideas problems concepts and theories of dimension from ancient to modern times It focuses primarily on topological and to a lesser extent measure theoretic approaches It offers a detailed account of the contributions of key mathematicians who shaped dimension theory including Bernard Bolzano Bernhard Riemann Georg Cantor Richard Dedekind Henri Poincaré L E J Brouwer Paul Urysohn Karl Menger Witold Hurewicz Paul Alexandroff and Felix Hausdorff The book examines the twists and turns in the development of the subject including its controversies and explores the philosophical aspects of its history As the first in depth historical study of dimension theory it serves as a reference for historians and philosophers of mathematics It also provides general historical background for students and researchers with broader mathematical interests

Universal Spaces and Mappings S.D. Iliadis, 2005-01-19 *Universal Spaces and Mappings* is devoted to universality problems A new approach to these problems is given using some specific spaces Since the construction of these specific spaces is set theoretical the given theory can be applied to different topics of Topology such as universal mappings dimension theory action of groups inverse spectra isometrical embeddings and so on
