Software Blueprints:

Software Blueprints David S. Robertson, Jaume Agustí, 1999 Conceptual models are descriptions of our ideas about a problem used to shape the implementation of a solution to it Everyone who builds complex information systems uses such models be they requirements analysts knowledge modellers or software designers but understanding of the pragmatics of model design tends to be informal and parochial Lightweight uses of logic can add precision without destroying the intuitions we use to interpret our descriptions Computing with logic allows us to make use of this precision in providing automated support tools Modern information scientists need to know what these methods are for and may need to build their own This book gives you a place to begin Where do you start when building models in a precise language like logic One way is by following standard paradigms for design and adapting these to your needs Some of these come from an analysis of existing informal notations Others are from within logic itself We take you through a sample of these from more commonplace styles of formal modelling to non standard methods such as techniques editing and argumentation Each of these provides a window onto broader areas of applied logic and gives you a basis for adapting the method to your own needs

Objects and Systems Bernard P. Zeigler, 2012-12-06 The author's aim in this textbook is to provide students with a clear understanding of the relationship between the principles of object oriented programming and software engineering Professor Zeigler takes an approach based on state representation to formal specification Consequently this book is unique through its emphasis on formulating primitives from which all other functionality can be built integral use of a semi formal behaviour specification language based on state transition concepts differentiation between behaviour and implementation a reusable heterogeneous container class library ability to show the elegance and power of ensemble methods with non trivial examples As a result students studying software engineering will find this a distinctive and valuable approach to programming and systems engineering

Iterative Software Engineering for Multiagent Systems Jürgen Lind,2001-05-30 The agent metaphor and the agent based approach to systems design constitute a promising new paradigm for building complex distributed systems However until now the majority of the agent based applications available have been built by researchers who specialize in agent based computing and distributed artificial intelligence If agent based computing is to become anything more than a niche technology practiced by the few then the base of people who can successfully apply the approach needs to be broadened dramatically A major step in this broadening endeavor is the development of methodologies for agent oriented software engineering accessible to and attractive for professional software engineers in their daily work Against this background this book presents one of the first coherent attempts to develop such a methodology for a broad class of agent based systems The author provides a clear introduction to the key issues in the field of agent oriented software engineering

Dilemma Web Based Booking and Counseling System James Karuga, 2012-08-20 Technical Report from the year 2008 in the subject Computer Science Software grade Merit London Metropolitan University course Computing Information Systems language English abstract This web based booking and counseling project was initially conceived for Dilemma Counseling Services as a web system offering counseling to masses refer to project proposal The idea then was to have an online portal where clients can post problems and counselors respond to them However the core issue was whether it would be done for free at the expense of Dilemma Counseling time and finances But as the idea of the web based counseling system was brainstormed by top management new requirements arose To maximize potential of the web based system proposed the management realized their booking system was a mess and resulted in data duplication and clashing bookings The ineffectual booking system then in place brought constant complaints from clients whose counseling sessions clashed The Dilemma Staff contracted me to offer expertise on if counseling and booking can be incorporated into a web based system that is financially viable this was possible So I adopted a Unified Software Development Process USDP because after interviewing the various staff I was not satisfied with the feedback Thus I choose USDP as the software development method since it allows new requirements to be factored at any project stage Sure enough as the software development process progressed new requirements arose like online counseling system processing payments made and assigning username and passwords for clients who pay but prefer online counseling as opposed to face to face counseling The system allows staff to book clients remotely online via secure log in The clients counseled can have their progress tracked easily via the secure counseling chat system I stuck to the USDP process and working on each workflow and resultant artifacts like Unified Modeling Language diagrams to ensure the project was well modeled to be
