Software Components with Ada Grady Booch,1987 *Software Engineering with Ada* Grady Booch,Douglas L. Bryan,Charles G. Petersen,1994 Provides complete coverage of the Ada language and Ada programming in general by recognized authorities in Ada software engineering Demonstrates the power and performance of Ada in the management of large scale object oriented systems and shows how to use Ada features such as generics packages and tasking [Software Engineering with Reusable Components](#) Johannes Sametinger,2013-04-17 Software is rarely built completely from scratch To a great extent existing software documents source code design documents etc are copied and adapted to fit new requirements Yet we are far from the goal of making reuse the standard approach to software development Software reuse is the process of creating software systems from existing software rather than building them from scratch Software reuse is still an emerging discipline It appears in many different forms from ad hoc reuse to systematic reuse and from white box reuse to black box reuse Many different products for reuse range from ideas and algorithms to any documents that are created during the software life cycle Source code is most commonly reused thus many people misconceive software reuse as the reuse of source code alone Recently source code and design reuse have become popular with object oriented class libraries application frameworks and design patterns Software components provide a vehicle for planned and systematic reuse The software community does not yet agree on what a software component is exactly Nowadays the term component is used as a synonym for object most of the time but it also stands for module or function Recently the term component based or component oriented software development has become popular In this context components are defined as objects plus some thing What something is exactly or has to be for effective software development remains yet to be seen However systems and models are emerging to support that notion **The Modula-2 Software Component Library** Charles Lins,2012-12-06 This book is the third and final volume in a series entitled The Modula 2 Software Component Library C Lins collection of reusable standard software components could be the basis for every programmer s software project in Modula 2 Components that are implementations of commonly used data structures are presented along with a description of their functionality and efficiency Moreover the books provide the background necessary to tailor these components to the specific needs of any Modula 2 environment For Modula 2 programmers this series of books could prove as useful and indispensable as the original language reference by Niklaus Wirth This third volume discusses the concepts of trees and graphs shows their specifications and provides implementations for various forms of trees and graphs [Fifth Conference on Artificial Intelligence for Space Applications](#),1990 **NASA Conference Publication** ,1990 **Domain Knowledge for Interactive System Design** Alistair G. Sutcliffe,David Benyon,Frans van Assche,1996-05-31 This book describes how domain knowledge can be used in the design of interactive systems It includes discussion of the theories and models of domain generic domain architectures and construction of system components for specific domains It draws on research
