development projects Wave power was initially seen as one of the front runners and some £15 million was spent on it before the deep sea wave programme was wound up in 1982 The decision to abandon deep sea wave power was the focus for much debate in which the author David Ross took a vigorous part His book *Energy From the Waves* first published in 1979 provided unique coverage for the general reader as well as for students of renewable energy of the technology involved in capturing the energy of the waves and of the historical and political development of this novel technology He has since followed the twists and turns of the debate over wave power and while his investigative journalism and campaigning style have not endeared him to the energy establishment his energetic exploration of the policy issues has provided us with a fascinating account of decision making processes The policy issues are now if anything more urgent than ever With nuclear power widely seen as an unviable option the development of renewable energy technologies along with conservation techniques are one way in which we can respond to the threat of global warming and other environmental problems Clearly some of his analysis is contentious But then the topic is controversial with interpretations of facts often still being in dispute For example in terms of the economics all we have are estimates of likely costs often based on purely conceptual systems framed in contemporary short term financial accounting contexts which usually ignore wider environmental considerations Given this situation it would probably be impossible to produce a totally independent and impartial review of the issues or a final conclusion on wave power The jury is still out Accepting this limitation although he is clearly a partisan for wave energy Ross provides us with a unique insight into the issues of the technological decision making process an insight which may help us decide on the issues ourselves Over the last decade or so renewable energy technology has moved from the margins to the mainstream By the year 2025 capturing the energy of waves could provide more than 20 per cent of the UK's electricity needs And this clean renewable power source would cause no environmental damage and no use of finite fossil fuel resources This book explains how it could work how experimental stations do work and the politics and vested interests that have hindered and continue to hinder it
