The Sectoral Effects of Real Depreciations in Latin America Mr. Sergi Lanau, 2017-11-16 This paper explores the effects of real exchange rate depreciations on growth across sectors identifying export cost and import penetration channels It tests the existence and magnitude of these channels in a panel difference in difference methodology Sectors that export more to begin with grow relatively more in response to a depreciation The same is true of sectors where import penetration in final demand is higher There is no evidence that depreciations reduce growth by making imported inputs more expensive A 10 percent real depreciation would increase growth of nontraditional sectors in Latin America by 0.62 percentage points mostly through the export channel

The Latin Real Book; C-version, **The Latin American Development Debate** Patricio Meller, 2019-07-11 In the 1980s Latin America experienced its second worst economic crisis of the century today the average per capita income is about 10 percent less than a decade ago Because the crisis affected all Latin American countries regardless of their economic policies the period has become known as the lost decade in Latin America In this book eminent economists from the region reexamine strategies of development structuralism versus monetarism liberalism versus statism growth versus equity in light of new theoretical knowledge and recent economic events The essays offer a complex interpretation of development problems and seek to explain how different schools of thought could be compatible and how old debates must be recast in the light of structural changes in Latin American economies In addition contributors critically review the adjustment processes applied in various countries Together the chapters offer a penetrating analysis of what went wrong in Latin America in the 1980s and a careful assessment of economic measures and policies that might prove viable in promoting stable and growing economies democratic regimes and social justice
