[The Laughter Factor](#) Dan Keller, 2000-03-14 I WAS DELIGHTED TO RECEIVE THIS NEW SUBMISSION BY Dr Daniel Keller The Laughter Factor presents laughter and humor as a form of therapy The author claims laughter is essential to the emotions the body and soul and the survival of civilization We all know that laughter is the best medicine and Dr Keller succeeds in proving this theory in his book Humor is at the core of a whole and healthy personality Keller adroitly describes the healing power of laughter based on case studies from individual and group therapy sessions He notes that we as humans neglect the power of laughter in our lives by taking humor for granted We ignore the healthy impact of a good hearty laugh on the body What happens when our cheeks blush and our belly shakes the spasm of a guffaw is more than a good feeling Our vocal cords are sounding an elixir as old as Solomon's praise of a merry heart And modern medicine tells us that we are measurably cleansing our somatic pores We now know that laughter catalyzes the endocrine system Our pituitary gland releases pain reducing chemicals Endorphins and enkephalins trigger the sensation of pleasure With a clear and lucid style Keller offers the reader a wealth of information that applies humor to therapy laughter and life as a preventative medicine of salvific proportions This makes for insightful and entertaining reading Dan Keller's book touches what I felt when I wrote *One Flew Over the Cuckoo's Nest* Both I and Randall Patrick McMurphy suggest you read it Ken Kesey Keller's book reminds us that laughter is the best medicine far better than a dose of medicine I recommend *The Laughter Factor* without a single reservation Virginia Durr Dr Keller writes about humor with humor He proves his point in story after story that humor really does make a difference Conrad Hyers I am delighted to see a book of the caliber Dan Keller has written on the role of humor in psychotherapy I believe its value will be in the stories it tells Gerald Piaget Keller's work is masterful It probes the light side of life and the philanthropic justice of laughter Tonia

Stewart Keller reminds us that when we go off the rails laughter picks us up and puts us back on track The Laughter Factor is a terrific book David Bouchier One may judge the importance of a book partly in terms of content and partly in terms of need On both counts Dr Kellers The Laughter Factor is important There is a dearth of literature available to the psychotherapist that applies humor theory to humor therapy Anyone who has done counseling surely senses that humor on the part of both therapist and client can be a significant ingredient in the healing process yet few have given the matter systematic reflection and application Freud made a preliminary effort in this direction in his Wit and the Unconscious and Keller draws upon his study but many aspects of the subject remained to be developed especially the uses of humor by the counselor and client The Laughter Factor corrects this lacuna in our knowledge Before Freud none other than the great American therapist Mark Twain credited healing powers to humor and to his profession when he wrote in Tom Sawyer of the old man who laughed joyously and loud shook up the details of his anatomy from head to foot saying that such a laugh was money in a mans pocket because it cut down the doctors bills like everything That in essence is what Kellers book is about including a chapter on recent research indicating the various positive effects of shaking up the details of ones anatomy from head to foot in hearty laughter A book that might profitably be read in conjunction with Kellers book is Ken Kesseys One Flew Over the Cu

The Leviathan Factor Lawrence E. Burkholder,2017-01-12 The Leviathan Factor tells the incredible story of how Satan created as Lucifer the morning star self transformed into Leviathan God s serpentine arch foe When he tried to achieve immortality by tweaking creation s lowest level laws a sophisticated computer automaton he created death instead As the serpent he reappeared in the Genesis tree of good and evil where he seduced humans to attempt immortality apart from covenant with God Leviathan is responsible for the false belief that we each have an inner divine spark which when reconnected to our ego awakens our true inherent divinity Unfortunately he and his demonic spirits also impact our minds bodies and environment as psi A few of the many markers of these demonic psi are levitation telepathy telekinesis deja vu emotional oppressions poltergeist activities past lives memories voices and visions near death and out of body experiences and trance channeling Many of these psi phenomena are co factors in mind disorders such as schizophrenia or epilepsy Manifestations in Christian circles include false tongues and holy laughter The Leviathan Factor is not a healing how to It is the first book to place demonic evil into the context of creation s basic structures and laws

Computing for the Understanding and Remediation of Social Cognitive Disorders Eric Brunet-Gouet, Ali Oker, Jean-Claude Martin, Ouriel Grynszpan, Philip L. Jackson, 2016-03-02

Advances in modern sciences occur thanks to within fields discoveries as well as confrontation of concepts and methods from separated sometimes distant domains of knowledge For instance the fields of psychology and psychopathology benefited from accumulated contributions from cognitive neurosciences which in turn received insights from molecular chemistry cellular biology physics neuroimaging statistics and computer sciences data processing etc From the results of these researches one can argue that among the numerous cognitive phenomena supposedly involved in the emergence the human intelligence and organized behavior some of them are specific to the social nature of our phylogenetic order Scientific reductionism allowed to divide the social cognitive system into several components i e emotion processing and regulation mental state inference theory of mind agency etc New paradigms were progressively designed to investigate these processes within highly controlled laboratory settings Moreover the related constructs were successful at better understanding psychopathological conditions such as autism and schizophrenia with partial relationships with illness outcomes Here we would like to outline the parallel development of concepts in social neurosciences and in other domains such as computer science affective computing virtual reality development and even hardware technologies While several researchers in neurosciences pointed out the necessity to consider naturalistic social cognition Zaki and Ochsner *Ann N Y Acad Sci* 1167 16 30 2009 the second person perspective Schilbach et al *Behav Brain Sci* 36 4 393 414 2013 and reciprocity de Bruin et al *Front Hum Neurosci* 6 151 2012 both computer and software developments allowed more and more realistic real time models of our environment and of virtual humans capable of some interaction with users As noted at the very beginning of this editorial a new convergence between scientific disciplines might occur from which it is tricky to predict the outcomes in terms of new concepts methods and uses Although this convergence is motivated by the intuition that it fits well ongoing societal changes increasing social demands on computer technologies augmenting funding it comes with several difficulties for which the current *Frontiers* in topic strives to bring some positive answers and to provide both theoretical arguments and experimental examples The first issue is about concepts and vocabulary as the contributions described in the following are authored by neuroscientists computer scientists psychopathologists etc A special attention was given during the reviewing process to stay as close as possible to the publication standards in psychological and health sciences and to avoid purely technical descriptions The second problem concerns methods more complex computerized interaction models results in unpredictable and poorly controlled experiments In other words the assets of naturalistic paradigms may be alleviated by the difficulty to match results between subjects populations conditions Of course this practical question is extremely important for investigating pathologies that are associated with profoundly divergent behavioral patterns Some of the contributions of this topic provide description of strategies that allowed to solve these difficulties at least partially The last issue is about heterogeneity of the objectives of the

researches presented here While selection criteria focused on the use of innovative technologies to assess or improve social cognition the fields of application of this approach were quite unexpected In an attempt to organize the contributions three directions of research can be identified 1 how innovation in methods might improve understanding and assessment of social cognition disorders or pathology 2 within the framework of cognitive behavioral psychotherapies CBT how should we consider the use of virtual reality or augmented reality 3 which are the benefits of these techniques for investigating severe mental disorders schizophrenia or autism and performing cognitive training The first challenging question is insightfully raised in the contribution of Timmermans and Schilbach 2014 giving orientations for investigating alterations of social interaction in psychiatric disorders by the use of dual interactive eye tracking with virtual anthropomorphic avatars Joyal Jacob and collaborators 2014 bring concurrent and construct validities of a newly developed set of virtual faces expressing six fundamental emotions The relevance of virtual reality was exemplified with two contributions focusing on anxiety related phenomena Jackson et al 2015 describe a new environment allowing to investigate empathy for dynamic FACS coded facial expressions including pain Based on a systematic investigation of the impact of social stimuli modalities visual auditory Ruch and collaborators are able to characterize the specificity of the interpretation of laughter in people with gelotophobia 2014 On the issue of social anxiety Aymerich Franch et al 2014 presented two studies in which public speaking anxiety has been correlated with avatars similarity of participants self representations The second issue focuses on how advances in virtual reality may benefit to cognitive and behavioral therapies in psychiatry These interventions share a common framework that articulates thoughts feelings or emotions and behaviors and proposes gradual modification of each of these levels thanks to thought and schema analysis stress reduction procedures etc They were observed to be somehow useful for the treatment of depression stress disorders phobias and are gaining some authority in personality disorders and addictions The main asset of new technologies is the possibility to control the characteristics of symptom eliciting stimuli situations and more precisely the degree to which immersion is enforced For example Baus and Bouchard 2014 provide a review on the extension of virtual reality exposure based therapy toward recently described augmented reality exposure based therapy in individuals with phobias Concerning substance dependence disorders Hone Blanchet et collaborators 2014 present another review on how virtual reality can be an asset for both therapy and craving assessment stressing out the possibilities to simulate social interactions associated with drug seeking behaviors and even peers pressure to consume The last issue this Frontiers topic deals with encompasses the questions raised by social cognitive training or remediation in severe and chronic mental disorders autistic disorders schizophrenia Here therapies are based on drill and practice or strategy shaping procedures and most of the time share an errorless learning of repeated cognitive challenges Computerized methods were early proposed for that they do effortlessly and with limited costs repetitive stimulations While repetition was incompatible with realism in the social cognitive domain recent advances provide both immersion and full control over stimuli Georgescu and al 2014

exhaustively reviews the use of virtual characters to assess and train non verbal communication in high functioning autism HFA Grynszpan and Nadel 2015 present an original eye tracking method to reveal the link between gaze patterns and pragmatic abilities again in HFA About schizophrenia Oker and collaborators 2015 discuss and report some insights on how an affective and reactive virtual agents might be useful to assess and remediate several defects of social cognitive disorders About assessment within virtual avatars on schizophrenia Park et al 2014 focused on effect of perceived intimacy on social decision making with schizophrenia patients Regarding schizophrenia remediation Peyroux and Franck 2014 presented a new method named RC2S which is a cognitive remediation program to improve social cognition in schizophrenia and related disorders To conclude briefly while it is largely acknowledged that social interaction can be studied as a topic of its own all the contributions demonstrate the added value of expressive virtual agents and affective computing techniques for the experimentation It also appears that the use of virtual reality is at the very beginning of a new scientific endeavor in cognitive sciences and medicine
