Through The Learning Glass:

Improving Learning Experience in MOOCs with Educational Content Linking Shang-Wen Li, 2017-01-31 Since its introduction in 2011 there have been over 4 000 MOOCs Massive Open Online Courses on various subjects on the Web serving over 35 million learners MOOCs have shown the ability to transcend time and space democratize knowledge dissemination and bring the best education in the world to every learner However the disparate distances between participants the size of the learner population and the heterogeneity of the learners backgrounds make it extremely difficult for instructors to interact with the learners in a timely manner which adversely affects learning experience and outcome To address the challenges in this thesis we propose a framework educational content linking By linking and organizing pieces of learning content scattered in various course materials into an easily accessible structure we hypothesize that this framework can provide learners guidance and improve content navigation Since most instruction and knowledge acquisition in MOOCs takes place when learners are surveying course materials better content navigation may help learners find supporting information to resolve their confusion and thus improve learning outcome and experience To support our conjecture we present end to end studies to investigate our frame work around two research questions We first ask can manually generated linking improve learning For investigating this question we choose two STEM courses statistics and programming language and demonstrate how the annotation of link ing among course materials can be done with collaboration between course staff and online workers With the annotation we implement an interface that can present learning materials and visualize the linking among them simultaneously We observe that in a large scale user study this interface enables users to search for desired course materials more efficiently and retain more concepts more readily This result supports the notion that manual linking can indeed improve learning outcomes Sec ond we ask can learning content be generated with machine learning methods For this question we propose an automatic content linking algorithm based on conditional random fields We demonstrate that automatically generated linking can still lead to better learning although the magnitude of the improvement over the unlinked interface is smaller We conclude that our linking framework can be implemented at scale with machine learning techniques
