The National Planning Policy Framework Great Britain: Parliament: House of Commons: Communities and Local Government Committee, 2011-12-21 This report recommends that a default answer of yes to development should be removed from the National Planning Policy Framework NPPF. The phrase significantly and demonstrably must also be removed from the presumption that all planning applications should be approved unless the adverse effects significantly and demonstrably outweigh the benefits because it adds a further barrier to the achievement of truly sustainable development. The definition of sustainable development is inadequate and often conflated with sustainable economic growth. The framework gives the impression that greater emphasis should be given in planning decisions to economic growth undermining the equally important environmental and social elements of the planning system. The NPPF should require local planning decisions to be taken in accordance with the presumption in favour of sustainable development consistent with Local Plans. It is unacceptable that so many parts of England have yet to develop and adopt a new Local Plan. Clarity within the NPPF has suffered in the pursuit of brevity. Inconsistent drafting could create gaps in planning policy or guidance that could lead to a huge expansion in the size of Local Plans as local authorities attempt to plug those gaps. The test for viability as currently worded risks

allowing unsustainable developments to go ahead if measures to make them sustainable are deemed to make them unviable for the developer MPs also call for a sensible transition period to give local authorities time to put Local Plans in place where they have not already done so

Transport Services Management in Africa Emmanuel Mogaji, Ogochukwu Ugboma, Chinebuli Uzundu, 2025-10-15 Transportation is an essential part of human activity and a service that makes an enormous contribution to the economic social and general well being of countries and their citizens However many developing countries and emerging economies are suffering from institutional challenges that impact their transport infrastructure and ability to provide an effective transport service This book highlights the research on transportation services in Africa and provides theoretical underpinning for future studies on transport service management It recognises that one size does not fit all acknowledging that transport service provision in Africa needs to be contextualised amidst the inherent challenges and the travel demands of citizens This book moves beyond Western transport land use and engineering research to explore transportation from a services and business perspective and provides a comprehensive resource encompassing transport service quality marketing communication public sector engagement with stakeholders and sustainable and inclusive transportation This edited collection brings together insights from authors across Africa to provide much needed theoretical and practical knowledge for academic researchers and students as well as policymakers in the region

Greening government Great Britain: Parliament: House of Commons: Environmental Audit Committee, 2009-08-05 This is the Committee's eighth report on the sustainable operations on the Government estate There has been some progress against targets but the Sustainable Development Commission has found that in 2007/08 the Government was not on track to meet its target for the reduction of carbon emissions from its own buildings The Government was on track to meet its targets for recycling and for the sourcing of electricity from renewable sources but it performed less well than it had in 2006/07 It must improve the sustainability of its operations each year The ease with which the Government continues to meet some targets even when its performance worsens indicates the urgent need for the Government to set itself more stringent targets The Government should extend the system of targets and monitoring beyond central government and agencies to the wider public sector including its outsourced operations The Government has the potential to drive change in the wider economy through sustainable procurement through investment in low carbon technologies and by driving the development of green skills in the workforce But the Sustainable Development Commission found that Government performed poorly against its own targets The Government must use its buying power to drive

progress towards a greener economy Many of the changes to the governance of Government's sustainable operations have been confusing or ineffective The Government must ensure that there is a clear line of accountability for these matters and the Cabinet Office Minister responsible must take an active role in overseeing performance management [The Future for Interurban Passenger Transport Bringing Citizens Closer Together](#) OECD,2010-05-04 This conference proceedings explores the future for interurban passenger transport The first group of papers investigates what drives demand for for interurban passenger transport and infers how it may evolve in the future The remaining papers investigate key challenges
