A Manual for Renewable Energy Assessment Marcia M. Gowen, 1984. This manual covers a rudimentary set of equations needed for estimating the energy potential and economics of various fuels and energy conversion. The primary purpose of the manual is to provide energy analysts with a common set of equations for comparing fuels and conversion technologies to make a general but not necessarily definitive energy and economic assessment. It focuses on conditions prevalent in tropical countries and describes how an energy planner might calculate a feedstock's energy potential after adjusting for various factors. A second objective of the manual is to provide planners with empirical data on fuels and technologies used in tropical regions, in particular the Asia-Pacific regions. A third objective is to present analysts with some simple economic tools to make financial analyses of energy systems, as well as discuss various social benefits or costs of alternative energy systems. Finally, the overriding objective of this manual is to tie together types of analyses, energy
