Badr,Luqi,Naval Postgraduate School (U.S.). Department of Computer Science,1993 This paper presents an evolution control system that provide automated assistance for the software evolution process in an uncertain environment where designer tasks and their properties are always changing We view an Evolution Control System ECS as the agent that keeps track of proposed ongoing and completed changes to a software system It provides automated assistance to the software evolution manager to help him her make the right decisions It automatically propagates change consequences by constructing the set of possibly affected modules It also coordinates change implementation activities within the design team in a way that supports teamwork and maintains system integrity as well as adapting itself to the dynamic nature of the evolution process where new changes arrive randomly and ongoing modifications are themselves subject to change as more information becomes available Computer aided software evolution Design team coordination Computer aided planning **Software Development** Elliot J. Chikofsky,1989 Computer Aided Software Engineering CASE has recently emerged as a commercially viable widespread application of software engineering techniques and computer technology to the current practice of information systems development CASE environments provide a mechanism for systems analysts to document and model an information system from its inception as user requirements through its design and implementation They provide the project team with powerful analytic tools to ensure consistency completeness and conformance to standards This volume provides an overview of the

current state and direction of CASE and identify its relationship to previous work in software development environments and automated tools The papers included were selected from IEEE Computer Society publications and other sources to survey the breadth of CASE and to highlight related areas for further exploration by the reader Automated Software Engineering ,1997
