Solitons Properties Dynamics Interactions Applications:

Solitons R. MacKenzie, M.B. Paranjape, W.J. Zakrzewski, 2012-12-06 Solitons were discovered by John Scott Russel in 1834 and have interested scientists and mathematicians ever since They have been the subject of a large body of research in a wide variety of fields of physics and mathematics not to mention engineering and other branches of science such as biology This volume comprises the written versions of the talks presented at a workshop held at Queen s University in 1997 an interdisciplinary meeting wherein top researchers from many fields could meet interact and exchange ideas Topics covered include mathematical and numerical aspects of solitons as well as applications of solitons to nuclear and particle physics cosmology and condensed matter physics The book should be of interest to researchers in any field in which solitons are encountered

Introduction to non-Kerr Law Optical Solitons Anjan Biswas, Swapan Konar, 2006-11-10 Despite remarkable developments in the field a detailed treatment of non Kerr law media has not been published *Introduction to non Kerr Law Optical Solitons* is the first book devoted exclusively to optical soliton propagation in media that possesses non Kerr law nonlinearities After an introduction to the basic features of fiber optic com

The sine-Gordon Model and its Applications Jesús Cuevas-Maraver, Panayotis G. Kevrekidis, Floyd Williams, 2014-07-22 The sine Gordon model is a ubiquitous model of Mathematical Physics with a wide range of applications extending from coupled torsion pendula and Josephson junction arrays to gravitational and high energy physics models The purpose of this book is to present a summary of recent developments in this field incorporating both introductory background material but also with a strong view towards modern applications recent experiments developments regarding the existence stability dynamics and asymptotics of nonlinear waves that arise in the model This book is of particular interest to a wide range of researchers in this field but serves as an introductory text for young researchers and students interested in the topic The book consists of well selected thematic chapters on diverse mathematical and physical aspects of the equation carefully chosen and assigned

Algebraic Methods in Physics Yvan Saint-Aubin, Luc Vinet, 2012-12-06 This book pays tribute to two pioneers in the field of Mathematical physics Jiri Patera and Pavel Winternitz of the CRM Each has contributed more than forty years to the subject of mathematical physics particularly to the study of algebraic methods

Theoretical Physics at the End of the Twentieth Century Yvan Saint-Aubin, Luc Vinet, 2013-03-14 The Centre de recherches mathématiques CRM was created in 1968 by the Université de Montréal to promote research in the mathematical sciences It is now a national institute that hosts several groups and holds special theme years summer schools workshops and a postdoctoral program The focus of its scientific activities ranges from pure to applied mathematics and includes statistics theoretical computer science mathematical methods in biology and life sciences and mathematical and theoretical physics The CRM also promotes collaboration between mathematicians and industry It is subsidized by the Natural Sciences and Engineering Research Council of Canada the Fonds FCAR of the Province de Québec and the Canadian Institute for Advanced Research and has

private endowments Current activities fellowships and annual reports can be found on the CRM Web page at www.crm.umontreal.ca The CRM Series in Mathematical Physics includes monographs lecture notes and proceedings based on research pursued and events held at the Centre de recherches mathématiques

Calogero—Moser— Sutherland Models
 Jan F. van Diejen, Luc Vinet, 2012-12-06 In the 1970s F Calogero and D Sutherland discovered that for certain potentials in one dimensional systems but for any number of particles the Schrödinger eigenvalue problem is exactly solvable Until then there was only one known nontrivial example of an exactly solvable quantum multi particle problem J Moser subsequently showed that the classical counterparts to these models is also amenable to an exact analytical approach The last decade has witnessed a true explosion of activities involving Calogero Moser Sutherland models and these now play a role in research areas ranging from theoretical physics such as soliton theory quantum field theory string theory solvable models of statistical mechanics condensed matter physics and quantum chaos to pure mathematics such as representation theory harmonic analysis theory of special functions combinatorics of symmetric functions dynamical systems random matrix theory and complex geometry The aim of this volume is to provide an overview of the many branches into which research on CMS systems has diversified in recent years The contributions are by leading researchers from various disciplines in whose work CMS systems appear either as the topic of investigation itself or as a tool for further applications

Some Musings on Theta, Eta, and Zeta
 Floyd L. Williams, 2023-11-02 This book continues the applications of mathematics more specifically of theta eta and zeta functions and modular forms to various areas of theoretical physics It is a follow up and extension in some sense of the author's earlier book entitled A window into zeta and modular physics Some of the main topics are 1 A new approach to logarithmic corrections to black hole entropy 2 My recent work that provides for an explicit cold plasma black hole connection 3 Generalization of work of physicists on certain asymptotic problems relating to string theory for example by way of the general theory of modular forms of non positive weight 4 A construction of the E8 root lattice its theta function and its relevance for heterotic string theory 5 Applications of elliptic functions to KdV nonlinear Schrödinger and Duffing equations for example including a discussion of Lax pairs and the Miura transformation 6 Finite temperature zeta functions and partition functions for quantum fields in thermal equilibrium on various curved background spacetimes 7 Exact solutions of the Einstein gravitational field equations for Lemaitre and inhomogeneous cosmological models with a special focus on the Szekeres Szafron exact solutions by way of the Weierstrass elliptic function 8 Elementary particles and my zeta function formula for higher spin fermionic particles this covers in particular the gravitino particle of spin 3/2 and bosons with integral spin s 2 3 4 5 These are some sample topics Others include the continuous Heisenberg model reaction diffusion systems Dirichlet and Hecke L functions the modular j invariant the computation of the one loop effective potential for non compact symmetric spaces the BTZ black hole Jacobi inversion formulas etc Thus there is a very large range of material with the first 9 chapters of preliminary expositional background for mathematicians and physicists

Zeitschrift Für Kristallographie

,2001 Mathematical Reviews ,2001 *The Painlevé Property* Robert Conte,2012-12-06 The subject this volume is explicit integration that is the analytical as opposed to the numerical solution of all kinds of nonlinear differential equations ordinary differential partial differential finite difference Such equations describe many physical phenomena their analytic solutions particular solutions first integral and so forth are in many cases preferable to numerical computation which may be long costly and worst subject to numerical errors In addition the analytic approach can provide a global knowledge of the solution while the numerical approach is always local Explicit integration is based on the powerful methods based on an in depth study of singularities that were first used by Poincar and subsequently developed by Painlev in his famous Leons de Stockholm of 1895 The recent interest in the subject and in the equations investigated by Painlev dates back about thirty years ago arising from three apparently disjoint fields the Ising model of statistical physics and field theory propagation of solitons and dynamical systems The chapters in this volume based on courses given at Cargse 1998 alternate mathematics and physics they are intended to bring researchers entering the field to the level of present research *Informe de actividades científicas y tecnológicas* Centro Atómico Constituyentes,1998 *High TC Update* ,1998 **Chemical Abstracts** ,2002 **Physics Briefs** ,1992 American Book Publishing Record ,1999 Journal of the Physical Society of Japan ,2004 **The Handbook of Computer Networks, Key Concepts, Data Transmission, and Digital and Optical Networks** Hossein Bidgoli,2008 A complete and in depth introduction to computer networks and networking In this first volume of The Handbook of Computer Networks readers will get a complete overview of the key concepts of computers networks data transmission and digital and optical networks Providing a comprehensive examination of computer networks the book is designed for both undergraduate students and professionals working in a variety of computer network dependent industries With input from over 270 experts in the field the text offers an easy to follow progression through each topic and focuses on fields and technologies that have widespread application in the real world **INIS Atomindex** ,1987 *Ukrainian journal of physics* ,2003 *Optics Index* ,1990
