one This book continues from book one and discusses the PRIME cause of cancer as discovered by Nobel Prize Laureate Dr
Otto Warburg considered by many as the founder of modern biochemistry There are prime and secondary causes of diseases
For example the prime cause of the plague is the plague bacillus but secondary causes of the plague are filth rats and the
fleas that transfer the plague bacillus from rats to man By a prime cause of a disease I mean one that is found in every case
of the disease Cancer above all other diseases has countless secondary causes But even for cancer there is only one prime
cause Summarized in a few words the prime cause of cancer is the replacement of the respiration of oxygen in normal body
cells by a fermentation of sugar All normal body cells meet their energy needs by respiration of oxygen whereas cancer cells
meet their energy needs in great part by fermentation All normal body cells are thus obligate aerobes whereas all cancer
cells are partial anaerobes From the standpoint of the physics and chemistry of life this difference between normal and
cancer cells is so great that one can scarcely picture a greater difference Oxygen gas the donor of energy in plants and
animals is dethroned in the cancer cells and replaced by an energy yielding reaction of the lowest living forms namely a
